Learning Abstract Algebra with ISETL Ed Dubinsky, Uri Leron, 2013-12-01 Most students in abstract algebra classes have great difficulty making sense of what the instructor is saying Moreover this seems to remain true almost independently of the quality of the lecture This book is based on the constructivist belief that before students can make sense of any presentation of abstract mathematics they need to be engaged in mental activities which will establish an experiential base for any future verbal explanation No less they need to have the opportunity to reflect on their activities This approach is based on extensive theoretical and empirical studies as well as on the substantial experience of the authors in teaching astract algebra The main source of activities in this course is computer constructions specifically small programs written in the mathlike programming language ISETL the main tool for reflections is work in teams of 2 4 students where the activities are discussed and debated Because of the similarity of ISETL expressions to standard written mathematics there is very little programming overhead learning to program is inseparable from learning the mathematics Each topic is first introduced through computer activities which are then followed by a text section and exercises This text section is written in an informed discusive style closely relating definitions and proofs to the constructions in the activities Notions such as cosets and quotient groups become much more meaningful to the students than when they are preseted in a lecture

Kibby,J.R. Hartley,2014-05-23 This volume contains a selection of the best papers from the Computer Assisted Learning 91 Symposium It includes research on a wide range of topics related to computers and learning with an emphasis on hard research evidence and innovative explorations Discovering Mathematics with Maple R.J. Stroeker,J.F. Kaashoek,2012-12-06 his book grew out of the wish to let students of econometrics get acquainted T with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student s understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical ed ucation be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite ex pression for a multiple parameter integral can not easily be handled by computer algebra either if at all
