Dijkstra once wrote that computer science is no more about computers than astronomy is about telescopes Despite the many
incredible advances in computer science from times that predate practical mechanical computing there is still a myriad of
fundamental questions in understanding the interface between computers and the rest of the world Why is it still hard to
mechanize many tasks that seem to be fundamentally routine even as we see ever increasing capacity for raw mechanical
computing The disciplined study of domain specific languages DSLs is an emerging area in computer science and is one which
has the potential to revolutionize the field and bring us closer to answering this question DSLs are formalisms that have four
general characteristics They relate to a well defined domain of discourse be it controlling traffic lights or space ships They have
well defined notation such as the ones that exist for prescribing music dance routines or strategy in a football game The
informal or intuitive meaning of the notation is clear This can easily be overlooked especially since intuitive meaning can be
expressed by many different notations that may be received very differently by users The formal meaning is clear and
mechanizable as is hopefully the case for the instructions we give to our bank or to a merchant online **Ford Falcon**
