Mathematics as an Educational Task Hans Freudenthal,1973 Like preludes prefaces are usually composed last Putting them in the front of the book is a feeble reflection of what in the style of mathematics treatises and textbooks I usually call the didactical inversion to be fit to print the way to the result should be the inverse of the order in which it was found in particular the key definitions which were the finishing touch to the structure are put at the front For many years I have contrasted the didactical inversion with the thought experiment It is true that you should not communicate your mathematics to other people in the way it occurred to you but rather as it could have occurred to you if you had known then what you know now and as it would occur to the student if his learning process is being guided This in fact is the gist of the lesson Socrates taught Meno's slave The thought experiment tries to find out how a student could re-invent what he is expected to learn I said about the preface that it is a feeble reflection of the didactical inversion Indeed it is not a constituent part of the book It can even be torn out Yet it is useful Firstly to the reviewer who then need not read the whole work and secondly to the author himself who like the composer gets an opportunity to review the Leitmotifs

Atto, Francesca Bovolo, Lorenzo Bruzzone, 2021-12-29 Change Detection and Image Time Series Analysis 2 presents supervised machine learning based methods for temporal evolution analysis by using image time series associated with Earth observation data Chapter 1 addresses the fusion of multisensor multiresolution and multitemporal data It proposes two supervised solutions that are based on a Markov random field the

first relies on a quad tree and the second is specifically designed to deal with multiresolution time series Chapter 2 provides an overview of pixel based methods for time series classification from the earliest shallow learning methods to the most recent deep learning based approaches Chapter 3 focuses on very high spatial resolution data time series and on the use of semantic information for modeling spatio temporal evolution patterns Chapter 4 centers on the challenges of dense time series analysis including pre processing aspects and a taxonomy of existing methodologies Finally since the evaluation of a learning system can be subject to multiple considerations Chapters 5 and 6 offer extensive evaluations of the methodologies and learning frameworks used to produce change maps in the context of multiclass and or multilabel change classification issues
