This monograph presents research related to big woodworking machines and in particular research related to big circular and big band saw machines These machines are characterized by their size which creates problems both in their design and during their normal operation Big static and dynamic loads occur during the technological process of sawing These loads give rise to deformations of the main links of the machines The final result is increased electricity consumption The monograph includes four chapters In the first chapter the influence of static and dynamic loads on the main links of machines is investigated In the second chapter transverse vibrations and spatial deformations of machine shafts are investigated In the third chapter deformation checks are made which can prevent damages in machines In the fourth chapter the kinetic energy losses of the two classes of machines are investigated The main purpose of these studies is to propose optimization solutions that lead to the minimization of energy losses **Cosgrove's Handbook of Woodworking Machinery** Cosgrove Company,1923 *Canadian Market for Sawmill and Woodworking Machinery ...* United States. safety through a process of flowcharts diagrams and extensive checklists the book draws on the expertise of the authors and current best practice within industry Each chapter sets out a clear practical approach to identifying and managing risks thereby enabling a robust and successful health and safety management system to be established in any workplace The book is written for non safety professionals such as managers and directors who want to discharge and manage their health and safety responsibilities in their workplace without the need to engage a consultant It will also appeal to the safety professional by providing an authoritative guide to current best practice together with the practicalities of managing health and safety risks
