Massimino Cocuzza, Prof. Arthur Agnello, Dr Elizabeth H. Beers, Dr Matthew J. Grieshop, 2023-01-24 This collection features four peer-reviewed reviews on managing arthropod pests in tree fruit. The first chapter provides a brief overview of the major aphid pests affecting tree fruit production, focussing on those causing economic damage in citrus, apple, pear, and stone fruit production. The chapter considers the techniques available for their control and looks ahead to future research in this area. The second chapter addresses the complex issue of managing and controlling arthropod pests in tree fruit production in the face of increasing pesticide regulatory restrictions, as well as public concerns about food safety and environmental impact. The chapter considers the need for a more basic understanding of pest biology and development which can then be used in predictive models to support the effective use of more selective and sustainable crop protection methods. The third chapter introduces key arthropod pests of apples and highlights the importance of integrated pest management (IPM) programmes in controlling infestations. The chapter reviews the tools and tactics available as part of a sustainable IPM programme, as well as current and future challenges facing IPM. The final chapter outlines key cultural tactics for managing arthropod pests in temperate tree fruit, including the modification of trees, tree architecture, orchard floor management, cultivation practices, mowing, and the cultivation of orchard cover crops. **The Water Legacies of Conventional Mining** James E. Nickum, David B. Brooks, Anthony Turton, Surina Esterhuyse, 2018-10-15

The impact of mining is too big to ignore in a world of oversubscribed water. This is true of conventional mining as much as or even more than hydraulic fracturing/fracking. The legacy issues of such mining on water have not been fully appreciated especially the irretrievable effects mining has had on communities and ecosystems around the world through its impact on water. Yet this is not an us or them problem: the wealth, influence and technical knowledge of mining interests can and must be part of the solution. All of the contributions to this volume either consider the deficiencies of existing governance structures and the need for better ones or explore the use of new techniques to identify and evaluate social and environmental impacts. The chapters in this book were originally published in the journal *Water International*. Renewable Energies Offshore C. Guedes Soares, 2015-09-07 *Renewable Energies Offshore* includes the papers presented in the 1st International Conference on Renewable Energies Offshore RENEW2014 held in Lisbon 24-26 November 2014. The conference is a consequence of the importance of the offshore renewable energies worldwide and an opportunity to contribute to the exchange of information on the dev.

The Psychosocial Aspects of a Deadly Epidemic Judy Kuriansky, 2016-03-21 Edited by a clinical psychologist who has been on the ground helping to develop psychosocial support for Ebola survivors in one of the hardest hit regions of West Africa, this book explains the devastating emotional aspects of the epidemic and its impact on survivors and the population in West Africa, families in the diaspora and people in the United States and other countries. It also describes lessons learned from past epidemics like HIV/AIDS and SARS and valuable approaches to healing from future epidemics. While the devastating Ebola epidemic has been contained, the effects of this outbreak, referred to by the World Health Organization as the most severe acute public health emergency seen in modern times, have wreaked a tremendous emotional toll on the populations of West Africa as well as on families and survivors worldwide. This groundbreaking book covers the psychosocial needs, programs and policies related to the Ebola epidemic and examines broader lessons of the outbreak such as changes in the ways in which healing from future epidemics can be handled. Edited by Judy Kuriansky PhD, a noted clinical psychologist and United Nations NGO representative with extensive experience helping after disasters worldwide and direct experience gained from being on the ground in West Africa in the midst of the epidemic, this book identifies and explains universal psychological factors at play in all such crises. It debunks myths regarding Ebola and describes the resulting psychological and social harm caused by the epidemic. The chapters cover overarching emotional issues and problems as well as the long-term impact on at-risk groups such as children, women and health workers; the impact of emotional issues on social and economic life; responses of government officials, media and various aid organizations; and solutions being offered by groups worldwide including service and humanitarian organizations, politicians, policymakers and public health education groups.
