Arachnid Dichotomous Key

One kind of arachnid, the wind scorpion, is so named because it seems to run as fast as the wind. The sea spider, another arachnid, lives on the ocean floor. The trapdoor spider digs a hole in the ground, covers it with a silk trapdoor, camouflages the trapdoor with leaves, and waits for its prey to walk across the trapdoor. When its prey passes above, the spider feels the vibrations and opens the trapdoor to make the capture. These arachnids are only three examples of the thousands of different types of arachnids. Arachnids, as well as other organisms, are often identified by their physical traits. A dichotomous key, based on visible physical traits, can help you identify members of a group of related organisms. Dichotomous means branching into two parts. As you use a dichotomous key, you read pairs of descriptions and decide which description of each pair is true for the organism you are trying to identify.

Using a Dichotomous Key

1. Before you use the dichotomous key to identify the arachnids, review arachnid anatomy by studying the diagrams below. In all arachnids, the body is divided into two sections: the cephalothorax and the abdomen. Find the cephalothorax and the abdomen in each arachnid. Note how these body sections are joined. Observe whether the abdomen is segmented or lacks segments (example "h" is segmented). All arachnids have six pairs of appendages: one pair of jaws, 4 pairs of walking legs, and one pair of pedipalps.
2. Use the dichotomous key to identify each arachnid. Beginning with the first pair of statements, decide which statement is true for the arachnid. Proceed to the next pair of statements as directed by the key. When the key lists a name rather than a number, then you have identified the arachnid.

Contemporary Insect Diagnostics Timothy J. Gibb, 2014-10-27 Contemporary Insect Diagnostics aids entomologists as they negotiate the expectations and potential dangers of the practice. It provides the reader with methods for networking with regulatory agencies, expert laboratories, first detectors, survey specialists, legal and health professionals, landscape managers, crop scouts, farmers, and the lay public. This enables the practitioner and advanced student to understand and work within this network, critically important in a time when each submission takes on its own specific set of expectations and potential ramifications. Insect diagnosticians must be knowledgeable on pests that affect human health, stored foods, agriculture, structures, as well as human comfort and the enjoyment of life. The identification and protection of the environment and the non-target animals, especially beneficial insects in that environment, is also considered a part of insect diagnostics. Additionally, Integrated Pest Management recommendations must include any of a variety of management tactics if they are to be effective and sustainable. This greatly needed foundational information covers the current principles of applied insect diagnostics. It serves as a quick study for those who are called upon to provide diagnostics, as well as a helpful reference for those already in the trenches. Includes useful case studies to teach specific points in insect diagnostics. Provides problem-solving guidance and recommendations for insect identification, threat potential, and management tactics while accounting for the varying needs of the affected population or client. Contains numerous color photos that enhance both applicability and visual appeal, together with accompanying write-ups of the common pests. **Revise IGCSE Biology India Edition** Dawson, 2008-01-16 ARTHROPODA NARAYAN CHANGDER, 2024-03-14 Note: Anyone can request the PDF version of this practice set workbook by emailing me at cbsenet4u@gmail.com.
