Visualizing Technology Chapter 2:

Museums and the Construction of Disciplines Christopher Whitehead, 2013-11-20 Museums and museum politics were important elements in the development of the disciplines of Archaeology and Art History in nineteenth century Britain Here Christopher Whitehead explores some of the key debates and events which led to the conceptual differentiation and physical separation of archaeological and artistic material culture looking especially at the ways in which objects and histories were contested within museum politics For example in the 1850s the status of Egyptian antiquities as art or archaeology was keenly debated and this related closely to questions about which kinds of museum should house them and the possible histories and epistemologies in which they might figure This concise study serves as a basis for a discussion of the continued intellectual legacy of this for our understanding management and presentation of the past in the museum and in curricula It is argued that by understanding the politics and circumstances through which the two disciplines were delimited and distinguished from one another we may be able to glimpse retrospectively the possibility of alternative art histories and alternative archaeologies *The Engine of Visualization* Patrick Maynard, 2018-08-06 In the first philosophical book wholly about photography Patrick Maynard dispels some basic persistent confusions by treating photography as a technology a way to enhance and filter human power Once photography is understood as a kind of technology Maynard argues insights about technology may be applied to provide the general perspective on photography that has been missing

combines traditional Taoist ideas with the digital humanities The book also offers a critique of the Western aesthetics underpinning data visualisation in particular the Kantian sublime which prioritises the experience of power over the natural world viewed at a distance Taoist philosophy in contrast highlights the integration of the surface of the body and the surface of nature as a Taoist body rather than promoting an opposition of mind and body The book then explores the transformational potential between the human body and technology particularly in creating an aesthetic approach spanning traditional Chinese aesthetics and gesture based technology Representing a valuable contribution to the digital humanities the book helps readers understand data based artistic practices while also bringing the ideas of traditional Chinese aesthetics to Western audiences In addition it will be of interest to practitioners in the fields of digital art and data visualisation seeking new models
