André Hoffmann innovator, researcher and developer, pioneer in the field of optical technologies, photonics, systematically researched the tooth colour and its origin with highest precision. See publication in 2000. This book shows an excerpt of this systematic original research at human teeth and dental shade guides with high precision measuring systems and high precision positioning system in vitro. Due to his basic scientific research he was able to quantify and isolate manifold factors influencing the colour of teeth. These include, for example, the light or measuring light and the type of light illuminant and illumination and colour temperature, the optical beam path of the light or the measuring geometry, the observation angle, the size of the measuring surface and measuring opening, the gloss, the liquid content, with scientific evidence of the relationship between liquid content and tooth colour, effect of drying, moisture and rehydration, the correlation between the liquid content and the gloss effect, the subjectivity of visual, subjective shade matching, crown curvature, type of system, spectrophotometer, tristimulus colorimeter, measuring mode, contact or non contact system, object relation, positioning, repeatability or reproducibility, lens shift, displacement between sample and measuring surface and further intra and interindividual factors. In addition, subjective visual determinations and objectified measurements were examined in subjective/objective comparisons using colour coordinates, comparisons. All these influencing factors are investigated on moist, drying, drier, various specific dehydration and rehydration states and dry teeth based on the brightness L*, on colour measurement values such as a*, b*, CIE LAB, C*, h*, CIE LCH, E* on the metamerism index, on spectral values and curves, tabs of dental shade guides and on tooth colour spaces. As part of this exploration, phenomena, e.g. changes and breaks in behaviour as well as highly individual developments in colour values, paradoxes between the values of subjective determination using shade guides and the values of objective measurements were identified and insights into the very complex colour dynamics through dehydration and rehydration were shown up to more than 8 days. The development of the individual colour measurement values was based on the liquid flow through the tooth and its tissues in particular during drying and rehydration and gave information about dynamics and the temporal extent of these processes. On the basis of this data, Hoffmann had developed several methods for research and practice, suggestions for feasible innovations such as monitoring of dental treatment to protect against pulp damage based on drying and reconstructing the colour of naturally moist teeth on those that have already dried, the identification of the living and the dead human and animals via the dental

fingerprint and a novel method of measuring the time of death for forensic medicine He also described a time limit of drying up to which relatively natural suitable colour values and shade matching results can be obtained and after which no colour determination should be carried out and he established the rehydration time after the end of the drying or dental treatment which must be waited in order to regain a natural tooth colour and to get correct values and results again His findings also show that teeth are able to store information on for example the condition liquid content colour values and the time within the drying and liquid re absorption chronology The author articulates a dental chronometer tooth clock dental data store tooth data store and a dental memory tooth memory and believes that significant progress in this field may include and could be achieved via a neural network for colour measurement apparatus A book for anyone interested in the natural sciences

sense of professional fulfillment and personal reward that comes from successfully restoring a patient's smile. This book, which serves as a complete primer on esthetic dentistry, is aimed at that precise reward. Informed by the latest scientific research and clinical evidence, the authors provide readers with keen insight into the artistic aspects essential to achieving a truly esthetic outcome. Preliminary chapters cover esthetic analysis, effective treatment planning, use of digital dental photography, and the importance of interdisciplinary collaboration. Further chapters outline effective treatment protocols, including the principles of ultraconservative restoration, tooth whitening, anterior and posterior all-ceramic restorations, in-office CAD/CAM technology, implant placement, and soft tissue management in the esthetic zone, and the usage of minimally invasive procedures. This book, in its extensive knowledge and passionate voice, represents the union of function and beauty in dentistry and, in doing so, establishes itself as a comprehensive resource in the field of dental esthetics.

Color and Appearance in Dentistry Alvaro Della Bona, 2020-04-03. This book presents the state of the art in color science and explains its application to dental structures and materials using high-quality illustrations to ensure ease of learning. Most people seek a bright smile with a natural appearance. This goal often poses a great clinical challenge for the dentist, and its achievement is dependent on a good knowledge of color science and optical properties relevant to dentistry. Further, if a smile is to be esthetically improved to the patient's satisfaction, the dentist must be able to extract the best from dental materials, and techniques must understand all aspects of facial harmony and must communicate effectively with both the patient and lab technicians. All of these aspects are thoroughly explored in the book with detailed coverage of such topics as visual and instrumental shade matching, color management, and avoidance of complications and pitfalls. *Color and Appearance in Dentistry* will be of high value to all who are engaged in the daily practice of esthetic dentistry.
