statement and cash flow statement work together to offer a snapshot of any company's financial health. Every term is defined in simple understandable language. Every concept is explained with a basic straightforward transaction example. And with the book's uniquely visual approach, you'll be able to see exactly how each transaction affects the three key financial statements of the enterprise. Each statement paints a different and essential picture: the three-legged stool of company reporting. The income statement shows the manufacturing or service offerings and selling actions of the company that result in profit or loss during a period. It gives a very important perspective on the company's performance, its profitability. The cash flow statement details cash into and out of the company for a period. You need money to make money. Running out of cash is bad. Duh. The balance sheet records at the end of a period, an instant in time, what the company owns and what it owes, including the owners' stake, called shareholders' equity.
