Story Emma Frances Bloomfield, 2024-02-27 Uncovering common threads across types of science skepticism to show why these controversial narratives stick and how we can more effectively counter them through storytelling *Science v Story* analyzes four scientific controversies climate change evolution vaccination and COVID 19 through the lens of storytelling Instead of viewing stories as adversaries to scientific practices Emma Frances Bloomfield demonstrates how storytelling is integral to science communication Drawing from narrative theory and rhetorical studies *Science v Story* examines scientific stories and rival stories including disingenuous rival stories that undermine scientific conclusions and productive rival stories that work to make science more inclusive *Science v Story* offers two tools to evaluate and build stories narrative webs and narrative constellations These visual mapping tools chart the features of a story i.e. characters action sequence scope storyteller and content to locate opportunities for audience engagement Bloomfield ultimately argues that we can strengthen science communication by incorporating storytelling in critical ways that are attentive to audience and context Religion and Science in the Mirror of Buddhism Francisca Cho, Richard K. Return of the God Hypothesis Stephen C. Meyer, 2021-03-30 The New York Times bestselling author of Darwin's Doubt Stephen Meyer presents groundbreaking scientific evidence of the existence of God based on breakthroughs in physics cosmology and biology Beginning in the late 19th century many intellectuals began to insist that scientific knowledge conflicts with traditional theistic belief that science and belief in God are at war Philosopher of science Stephen Meyer challenges this view by examining three scientific discoveries with decidedly theistic implications Building on the case for the intelligent design of life that he developed in Signature in the Cell and Darwin's Doubt Meyer demonstrates how discoveries in cosmology and physics coupled with those in biology help to establish the identity of the designing intelligence behind life and the universe Meyer argues that theism with its affirmation of a transcendent intelligent and active creator best explains the evidence we have concerning biological and cosmological

origins Previously Meyer refrained from attempting to answer questions about who might have designed life Now he provides an evidence based answer to perhaps the ultimate mystery of the universe In so doing he reveals a stunning conclusion the data support not just the existence of an intelligent designer of some kind but the existence of a personal God **Braille**
