Ivanov, Nicolas Sierro, Manuel C.

Peitsch, 2020-03-16 This book describes the history of tobacco genomics from its discovery by Europeans to next generation omics approaches in plant science. The authors primarily focus on the allotetraploid common tobacco plant *N. tabacum*, however, separate chapters are dedicated to closely related *Nicotiana* species such as *N. benthamiana* and *N. attenuata* for which substantial progress in omics data analysis has been already achieved. While genetic maps, transcriptomes, and physical maps of BAC libraries have significantly enhanced our understanding of the tobacco plant, the genome of tobacco and related *Nicotiana* species has opened a new era in modern tobacco research. This book addresses current and future industrial and research applications as well as central challenges in tobacco science, including diseases, low variability of cultivars, the genome's large size, polyploidy, and gene duplication.
