Summary

Kinetics Toolkit is a Python package for generic biomechanical analysis of human motion that is easily accessible by new programmers. The only prerequisite for using this toolkit is having minimal to moderate skills in Python and Numpy.

While Kinetics Toolkit provides a dedicated class for containing and manipulating data (Time Series), it loosely follows a procedural programming paradigm where processes are grouped as interrelated functions in different submodules, which is consistent with how people are generally introduced to programming. Each function has a limited and well-defined scope, making Kinetics Toolkit generic and expandable. Particular care is given to documentation, with extensive tutorials and API references. Special attention is also given to interoperability with other software programs by using Pandas Dataframes (and therefore CSV files, Excel files, etc.), JSON files or C3D files as intermediate data containers.

Kinetics Toolkit is accessible at <https://kineticstoolkit.uqam.ca> and is distributed via conda and pip.

Designing Digital Musical Instruments Using Probatio Filipe Calegario,2018-12-24 The author presents Probatio a toolkit for building functional DMI digital musical instruments prototypes artifacts in which gestural control and sound production are physically decoupled but digitally mapped He uses the concept of instrumental inheritance the application of gestural and or structural components of existing instruments to generate ideas for new instruments To support analysis and combination he then leverages a traditional design method the morphological chart in which existing artifacts are split into parts presented in a visual form and then recombined to produce new ideas And finally he integrates the concept and the method in a concrete object a physical prototyping toolkit for building functional DMI

From Studies To Streams Ray C. Rist, Nicoletta Stame, 2006 Recent developments in the area of policy evaluation have focused on new notions of process and use or notably influence But this debate among evaluators on how evaluations are used has been essentially a closed one evaluators talking only among themselves The debate has gone on seemingly oblivious to fundamental changes in the intellectual landscape of public management organizational theory information technology and knowledge management New realities demand a different approach toward

evaluation The current era is characterized by the emergence of an increasingly global set of pressures for governments to perform effectively not just efficiently and to demonstrate that their performance is producing desired results Information technology allows enormous quantities of information to be stored sorted analyzed and made available at little or no cost The result for those in the evaluation community is that while individual evaluations are still conducted and reported upon they are a rapidly diminishing source of information In the new environment ever accelerating political and organizational demands and expectations are reframing thinking about the definition of what fundamentally constitutes evaluation and what we understand as its applications In this twelfth volume in the Comparative Policy Evaluation series authors from fourteen nations address these issues from multiple vantage points This latest volume in the series is an essential tool for policymakers government officials and scholars interested in the contemporary status of evaluation Ray C Rist is a senior evaluation officer in the World Bank He has served as university professor at The Johns Hopkins University Cornell University and George Washington University His career has included fifteen years in the U S government in both the Executive and Legislative branches He has authored edited or co edited twenty four books and written over 125 articles Nicoletta Stame teaches social policy at the University La Sapienza Rome She was a co founder and first president of the Italian Evaluation Association Her previous publications include *L'esperienza della valutazione*
