For Your Information

Philip Tetlow, 2024-08-12 In recent times physicists have come to appreciate information's central role in the universe's grand plan That and the fact that an explicit understanding of the informational relationships involved may well be key to unlocking many of the universe's deepest secrets That makes the birth of both Computer and Information Science not only essential to the explosion of modern technological success but also to our understanding of reality itself In recognizing that what unfolds is a story not only about Alan Turing and his pioneering colleagues but also great thinkers like Albert Einstein Michael Faraday Ludwig Wittgenstein and others It therefore pulls in much of modern history and touches on seminal events like the birth of the atomic bomb It also hints at the reasons behind the various social and political divides we see in the world today So in many ways the story of how we became more informed about information is also the story of the modern age What you will read of here is the role that information plays in that ongoing saga and many of the twists and turns that have brought us to where we are with information today In it you will learn that unbeknown to Turing and others their work would not only help overthrow the Nazis and thaw the chilling atmosphere of the Cold War to come but also echo down the ages to remain relevant in a conflict still raging today That sees the Computer and Information Scientists at loggerheads as

they fight to find a right and justifiable place for meaning in information's definition
