The GFPM is a dynamic economic equilibrium model that is used to predict production, consumption, trade and prices of 14 major forest products in 180 interacting countries. The book thoroughly documents the methods, data and computer software of the model and demonstrates the model's usefulness in addressing international economic and environmental issues. *The Global Forest Products Model* is written by an international multi-disciplinary team and is ideal for graduate students and professionals in forestry, natural resource economics and related fields.
