staggering 100 trillion due to AMR in the next thirty years <https://www.who.int/health-topics/antimicrobial-resistance>
Researching the development of antibiotic resistance and exploring ways to prevent detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as Enterococcus faecium and Staphylococcus aureus due to their clinical significance and diverse resistance mechanisms Unfortunately the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in human specimens Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings They may even lead to diseases in healthy individuals if being introduced into hosts system by traumatization Management of such infections is often challenging due to the lack of guidelines standards for antibiotic susceptibility tests as well as multi drug resistance MDR Lately diseases linked to non pathogenic microorganisms are becoming more common under typical conditions such as Stenotrophomonas maltophilia Elizabethkingia spp Acinetobacter baumannii and many others **Science, Grade 3** Natalie Rompella,2016-01-04
