Mediterranean The interviews in this volume shed light on educational movements challenges and aspirations in a region that is attaining increasing importance geo politically and in comparative and international studies These are powerful and critical voices providing readers with fresh often unexpected insights about contexts cultures and convictions that deserve global attention The interviews with these men and women inform intrigue but above all inspire calling as they do for an earnest commitment to a vision of education as a transformative democratising force In contrast to the global totalising discourse that has increasingly defined education in narrowly economic terms here are the beginnings of alternative agendas inviting citizens to read and decode the world around them and to confront power wherever it lies In doing so the educators in this volume draw upon and put at our disposal a wide array of theoretical lenses nimbly weaving these within a narrative that speaks about a lifetime lived in the hope of making a difference These then are vivid engaging and reflexive accounts emerging from contexts where democracy has only recently taken root if at all and from a region that has come to symbolize the return of the political and the reclaiming of the public sphere as a site for transformation contestation revolt and hope

Artiles, 2016-12-01. This latest volume in the World Yearbook of Education series examines the relationship between assessment systems and efforts to advance equity in education at a time of growing inequalities. It focuses on the political motives behind the expansion of an assessment industry, the associated expansion of an SEN industry and a growth in consequential accountability systems. Split into three key sections, the first part is concerned with the assessment industry and considers the purpose and function of assessment in policy and politics and the political context in which particular assessment practices have emerged. Part II of the book on assessing deviance explores those assessment and identification practices that seek to classify different categories of learners including children with Limited English Proficiency with special needs and disabilities and with behavioural problems. The final part of the book considers the consequences of assessment and the possibility of fairer and more equitable alternatives, examining the production of inequalities within assessment in relation to race, class, gender and disability. Discussing in detail the complex historical intersections of assessment and educational equity with particular attention to the implications for marginalised populations of students and their families, this volume seeks to provide reframings and reconceptualisations of assessment and identification by offering new insights into economic and cultural trends influencing them. Co-edited by two internationally renowned scholars, Julie Allan and Alfredo J. Artiles, *World Yearbook of Education 2017* will be a valuable resource for researchers, graduates and policy makers who are interested in the economic trends of global education assessment. **Access and Equity** Sandra Crespo, Sylvia Celedon-Pattichis, Marta Civil, 2017. **Mathematics Learning in Early Childhood** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-11-13. Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings and identifies the changes needed to improve the

quality of mathematics experiences for young children This book serves as a call to action to improve the state of early childhood mathematics It will be especially useful for policy makers and practitioners those who work directly with children and their families in shaping the policies that affect the education of young children

**Critical Mathematics Education** Paul Ernest, Bharath Sriraman, Nuala Ernest, 2016-01-01 Mathematics is traditionally seen as the most neutral of disciplines the furthest removed from the arguments and controversy of politics and social life However critical mathematics challenges these assumptions and actively attacks the idea that mathematics is pure

objective and value neutral. It argues that history, society and politics have shaped mathematics not only through its applications and uses but also through molding its concepts, methods and even mathematical truth and proof, the very means of establishing truth. Critical mathematics education also attacks the neutrality of the teaching and learning of mathematics, showing how these are value-laden activities indissolubly linked to social and political life. Instead, it argues that the values of openness, dialogicality, criticality towards received opinion, empowerment of the learner and social, political engagement and citizenship are necessary dimensions of the teaching and learning of mathematics if it is to contribute towards democracy and social justice. This book draws together critical theoretic contributions on mathematics and mathematics education from leading researchers in the field. Recurring themes include: The natures of mathematics and critical mathematics education; issues of epistemology and ethics; Ideology, the hegemony of mathematics; ethnomathematics and real life education; Capitalism, globalization, politics, social class, habitus, citizenship and equity. The book demonstrates the links between these themes and the discipline of mathematics and its critical teaching and learning. The outcome is a groundbreaking collection unified by a shared concern with critical perspectives of mathematics and education and of the ways they impact on practice.
