Estimation and Optimal Traffic Signal Timing Tsai-Yun Liao, Randy B. Machemehl, 1998 The objectives of this report are to develop an analytical model to estimate fuel consumption and to investigate the effects of signal timing on fuel consumption Several numerical experiments including a variety of geometric configurations traffic conditions and signal timing are conducted to test the AFCM estimation capability and to investigate the effects of signal timing on fuel consumption The results from these experiments indicate that total fuel consumption with respect to signal cycle time possesses a convex pattern In order to analytically establish the relationship between fuel consumption and signal timing a three term form is reduced from the AFCM to represent major effects of vehicle characteristics traffic behavior and fuel consumption parameters on optimal cycle length The first term represents vehicle ideal fuel consumption the second term describes vehicle fuel consumption during acceleration after a stop and the third term accounts for stochastic effects Numerical analysis and comparisons show that the optimal cycle lengths from the expression are rather close to those from the AFCM Societal Risk Assessment Richard C. Schwing, Walter A. Albers, 2013-12-19 This volume constitutes the papers and discussions from a symposium on Societal Risk Assessment How Safe is Safe Enough held at the General Motors Research Laboratories on October 8 9 1979 This symposium was the twenty fourth in an annual series sponsored by the Research Laboratories Initiated in 1957 these symposia have as their objective the promotion of the interchange of knowledge among specialists from many allied disciplines in rapidly developing or changing areas of science or technology Attendees characteristically represent the academic government and industrial institutions that are noted for their ongoing activities in the particular area of interest The objective of this symposium was to develop a balanced view of the current status of societal risk assessment's role in the public policy process and then to establish if possible future directions of

research Accordingly the symposium was structured in two dimensions certainty versus uncertainty and the subjective versus the objective Furthermore people representing extremely diverse disciplines concerned with the perception quantification and abatement of risks were brought together to provide an environment that stimulated the exchange of ideas and experiences The keys to this exchange were the invited papers arranged into four symposium sessions These papers appear in this volume in the order of their presentation The discussions that in turn followed from the papers are also included
