

Case Cleaning and Rebuilding Preparation

- 1** The case is now empty and ready to be cleaned and inspected. Look specifically for case lug damage at the center support area and for cracks in the bellhousing area. Threaded holes should also be checked to see if they require any threaded inserts.

- 2** A high-pressure power washer is an excellent way to remove heavy grease, dirt, and road tar from the case.

- 3** Use a large flat-blade screwdriver or seal puller to remove the manual shaft seal from the case.

- 4** Power wash the tail housing as well and remove the seal if it is still in place.

- 5** Dry the case with compressed air, taking extra time to get all of the water out of the many case passages. Once the case is cleaned and dry, the exterior can be painted. Cast-finish paint looks very much like the factory finish.

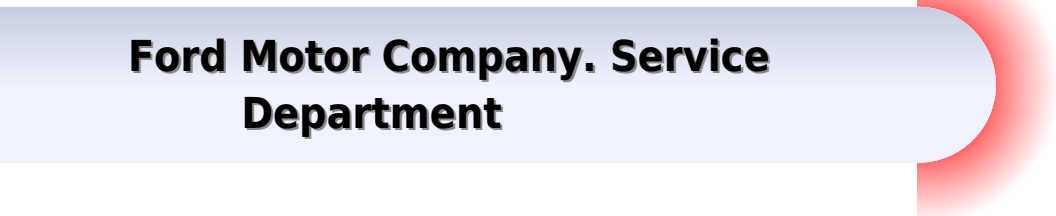

Protect Your Hearing

Make sure you wear hearing protection during this operation. Applying high-pressure compressed air to case passages and sharp corners can cause hearing loss. ■
