The Alternative Introduction To Biological Anthropology:

The Alternative Introduction to Biological Anthropology Jonathan M. Marks, 2018 In The Alternative Introduction to Biological Anthropology Second Edition author Jonathan Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks Each chapter draws on and complements but does not reconstitute except for the sake of clarity the major data and ideas presented in standard texts Marks explores such topics as how we make sense of data about our origins where our modern ideas come from our inability to separate natural facts from cultural facts and values as we try to understand ourselves and the social and political aspects of science as a culturally situated mental activity

The Alternative Introduction to Biological Anthropology Jonathan Marks, 2011 In The Alternative Introduction to Biological Anthropology author Jon Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks Each chapter draws on and complements but does not reconstitute except for the sake of clarity the major data and ideas presented in standard texts Marks explores such topics as how we make sense of data about our origins where our modern ideas come from our inability to separate natural facts from cultural facts and values as we try to understand ourselves and the social and political aspects of science as a culturally situated mental activity Features Offers clear intelligent and completely original discussions injected with a sense of humor that will keep students reading Addresses core topics in a way that does not simply mirror what is in the basic textbooks but offers a new spin thereby fostering critical thinking Complements traditional textbooks in biological anthropology and explores connections between biological and general anthropology Provides expert integration of topics coherent narratives and salient examples Utilizes theme statements at the start of each chapter that introduce the breadth of information covered and engage students in the material

The Human Species: An Introduction to Biological Anthropology John Relethford, 2009-08-28 This text introduces physical anthropology the science of human biological evolution and variation Divided into four parts it addresses the major questions that concern biological anthropologists What are humans Where are our origins How did we evolve and are we still evolving and What does the future hold for the human species with an emphasis on hypothesis testing and the relationship between biology and culture

[Racial Segregation and Eugenical Science Between the Wars](#) Michael L. Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon

an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies

Rethinking Human Evolution
Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology's history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizzio Mc Manus Apurva Narechania Michael D Petraglia Thomas W

Relethford, 2012-03-27 Introductory guide to human population genetics and microevolutionary theory Providing an introduction to mathematical population genetics Human Population Genetics gives basic background on the mechanisms of human microevolution This text combines mathematics biology and anthropology and is best suited for advanced undergraduate and graduate study Thorough and accessible Human Population Genetics presents concepts and methods of population genetics specific to human population study utilizing uncomplicated mathematics like high school algebra and basic concepts of probability to explain theories central to the field By describing changes in the frequency of genetic variants from one generation to the next this book hones in on the mathematical basis of evolutionary theory Human Population Genetics includes Helpful formulae for learning ease Graphs and analogies that make basic points and relate the evolutionary process to mathematical ideas Glossary terms marked in boldface within the book the first time they appear In text citations that act as reference points for further research Exemplary case studies Topics such as Hardy Weinberg equilibrium inbreeding mutation genetic drift natural selection and gene flow Human Population Genetics solidifies knowledge learned in introductory biological anthropology or biology courses and makes it applicable to genetic study NOTE errata for the first edition can be found at the author s website http://employees.oneonta.edu/relethjh/HPG_errata.pdf *Unmarking Whiteness and the New American Racism* Michael L. Blakey, 2025-07-18 This book criticizes recent performative solutions to racism diversity programs at universities for example and White people s Fragility or intolerance of mature criticism These ideas are locked in an intellectually gated and defensive conversation that effectively denies the ongoing particular abuses of White supremacy This book instead proposes expensive educational and economic changes including reparations as necessary to achieve real equity Once imputed by the eugenical effects of World War II and the Civil Rights Movement s opposition to White racism the word race was largely stricken from scientific writing But biological determinism remained deeply ensconced in an institution of science that assumed the natural world to be determining making natural science its most authoritative means Authoritative heritability estimates and genetic correlations though spurious continued to imply that obvious racial and class inequalities including their dire health effects were natural and acceptable White people often attempted to unmark their racial identity and assumed that of the uniquely normal people as though an act of anti racism Frankenberg shows On the contrary it served to deny their skin color privileges while enjoying benefits of ongoing structural racism as the only real complete human beings in the room This book uses an ethnology of anthropology to show White people s equivocal views of other s equality in their formal analyses museum collections and exhibitions and treatment of colleagues in recent times They remained deliberately deaf to critical African diasporic scholarship Thus Unmarking gives an anthropological analysis of the social history of White supremacy and shows what it is like for some to confront it In constructing this historical and sociological
