Irrationality, Transcendence and the Circle-Squaring Problem Eduardo Dorrego López, Elías Fuentes Guillén, 2024-05-02 This publication now in its second edition includes an unabridged and annotated translation of two works by Johann Heinrich

Lambert 1728 1777 written in the 1760s Vorl ufige Kenntnisse f r die so die Quadratur und Rectification des Circuls suchen and M moire sur quelques propri t s remarquables des quantit s transcendentes circulaires et logarithmiques The translations as in the first edition are accompanied by a contextualised study of each of these works and provide an overview of Lambert s contributions showing both the background and the influence of his work In addition by adopting a biographical approach it allows readers to better get to know the scientist himself Lambert was a highly relevant scientist and polymath in his time admired by the likes of Kant who despite having made a wide variety of contributions to different branches of knowledge later faded into an undeserved secondary place with respect to other scientists of the eighteenth century In mathematics in particular he is famous for his research on non Euclidean geometries although he is likely best known for having been the first who proved the irrationality of π In his M moire he conducted one of the first studies on hyperbolic functions offered a surprisingly rigorous proof of the irrationality of π established for the first time the modern distinction between algebraic and transcendental numbers and based on such distinction he conjectured the transcendence of π and therefore the impossibility of squaring the circle

Circles Disturbed Apostolos Doxiadis, Barry Mazur, 2012-03-18 Why narrative is essential to mathematics *Circles Disturbed* brings together important thinkers in mathematics history and philosophy to explore the relationship between mathematics and narrative The book s title recalls the last words of the great Greek mathematician Archimedes before he was slain by a Roman soldier Don t disturb my circles words that seem to refer to two radically different concerns that of the practical person living in the concrete world of reality and that of the theoretician lost in a world of abstraction Stories and theorems are in a sense the natural languages of these two worlds stories representing the way we act and interact and theorems giving us pure thought distilled from the hustle and bustle of reality Yet though the voices of stories and theorems seem totally different they share profound connections and similarities A book unlike any other *Circles Disturbed* delves into topics such as the way in which historical and biographical narratives shape our understanding of mathematics and mathematicians the development of myths of origins in mathematics the structure and importance of mathematical dreams the role of

storytelling in the formation of mathematical intuitions the ways mathematics helps us organize the way we think about narrative structure and much more In addition to the editors the contributors are Amir Alexander David Corfield Peter Galison Timothy Gowers Michael Harris David Herman Federica La Nave G E R Lloyd Uri Margolin Colin McLarty Jan Christoph Meister Arkady Plotnitsky and Bernard Teissier
