Steel Design 1 H. H. Snijder, H. M. G. M. Steenbergen, 2020-07-21 This textbook covers the design and analysis of steel structures for buildings according to EN 1990 Eurocode 0 EN 1991 Eurocode 1 and EN 1993 Eurocode 3 Chapter 1 describes the theory and background of EN 1990 in terms of structural safety reliability and the design values of resistances and actions Chapter 2 deals with actions and deformations described in EN 1991 The permanent loads and variable actions and in particular the imposed loads and the snow loads and wind actions are discussed This chapter also contains three worked examples to determine the actions on a floor in a residential house the actions on a free standing platform canopy at a station and the wind actions on the fa ades of an office building Chapter 3 is about modelling discussing the schematisation of the structural system the joints and the material properties as well as the cross section properties Chapter 4 deals with the classification of frames and the various analysis methods for unbraced and braced frames Chapter 5 then goes deeper into these analysis methods to determine the force distribution and deformations Chapter 6 deals with the assessment by code checking of parts of the steel structure with EN 1993 1 1 and EN 1993 1 8 At a basic level the assessment of the resistance of cross sections the stability of members under axial forces and the resistance of bolted and welded connections are explained Chapter 7 discusses in an extensive way the assessment by code checking of the resistance of cross sections both for single and combined internal forces The principles of the assessment of the resistance of cross sections according to elastic and plastic theory are also discussed

Design of Steel Structures Elias G. Abu-Saba, 2012-12-06 This book is intended for classroom teaching in architectural and civil engineering at the graduate and undergraduate levels Although it has been developed from lecture notes given in structural steel design it can be useful to practicing engineers Many of the examples presented in this book are drawn from the field of design of structures Design of Steel Structures can be used for one or two semesters of three hours each on the undergraduate level For a two semester curriculum Chapters 1 through 8 can be used during the

first semester Heavy emphasis should be placed on Chapters 1 through 5 giving the student a brief exposure to the consideration of wind and earthquakes in the design of buildings With the new federal requirements vis a vis wind and earthquake hazards it is beneficial to the student to have some understanding of the underlying concepts in this field In addition to the class lectures the instructor should require the student to submit a term project that includes the complete structural design of a multi story building using standard design procedures as specified by AISC Specifications Thus the use of the AISC Steel Construction Manual is a must in teaching this course In the second semester Chapters 9 through 13 should be covered At the undergraduate level Chapters 11 through 13 should be used on a limited basis leaving the student more time to concentrate on composite construction and built up girders Structural Steel Design Jack C. McCormac,1992 This introductory text on structural steel design continues Jack McCormac's tradition of writing textbooks that are accessible to students Complicated theoretical derivations are presented in an easy to understand manner without overburdening students with technical explanations The latest edition of this popular text conforms to AISC's 1989 Standards on Allowable Stress Design Numerous topics have been expanded in the fourth edition including block shear flexural torsional buckling and eccentrically loaded connections Due to the expanded interest in the LRFD method four chapters have been added to the text as an introduction to the subject Structural Steel Design to BS 5950: Part 1 Frixos Joannides,Alan Weller,2002 BS 5950 the design code for structural steel has been greatly revised Joannides and Weller introduce the new code and provide the necessary information for design engineers to implement the code when designing steel structures in the UK
