five to eight week period Compared to the limited number of students worldwide who can engage in study abroad COIL VE potentially opens up more equitable and inclusive participation in international education and intercultural experiences to all students involves them in rigorous disciplinary and interdisciplinary studies and promotes close and constructive engagement with students with different cultural perspectives While many COIL courses are launched by individual instructors based on their research connections and online outreach they are being increasingly supported and led by dedicated COIL Coordinators who facilitate virtual exchanges and provide professional development This comprehensive guide covers COIL VE pedagogy provides examples of what takes place in the COIL classroom and explores what instructors and staff need to know to facilitate and support a variety of COIL courses across the curriculum It addresses how institutional stakeholders especially those in leadership positions can develop and embed a successful COIL initiative at their institution It offers varied perspectives of COIL viewed from different institutional and cultural vantage points from research universities community and technical colleges and university systems and describes how COIL VE is developing in five different world regions presenting eleven case studies The book concludes with a guide to thirteen global organizations that support COIL and other forms of VE Additionally the book provides links to the COIL Connect for Virtual Exchange website <https://coilconnect.org> which includes an updated directory of organizations an expanding database of faculty and institutions participating in COIL and looking for partners course templates survey data and case studies This book offers faculty and administrators across the world whether formally involved in international education in service learning and community engagement or wanting to incorporate a cross cultural perspective in their disciplinary courses theoretical foundations guidance on effective collaboration and the strategic and pedagogical considerations to develop robust COIL VE courses and programs

Titles Without Merit Francis Machingura, Munyaradzi Mawere, 2024-05-29 This book examines the controversial issues surrounding the desire for titles both earned and unearned in Zimbabwe and beyond The desire for titles is often associated with the quest for status power class and recognition Unfortunately this desire has resulted in faking and the problem of distinguishing genuine PhDs from fake ones The unscrupulous quest for fake degrees is referred to in this book as Titlemania or Taitolomania The scramble for titles has not spared community leaders across the divide Of concern is the failure of higher education students to use their earned titles to contribute to the search for solutions to societal problems through national technological development The perspectives of the contributors in this volume provoke debates on the value of doctorates in Africa and Zimbabwe in particular considering that most PhD holders are not using their degrees to contribute to national development production of goods and services and the improvement of societal conditions

Applying Theories for Information Systems Research Tiko Iyamu, 2021-09-26 This book sets out to provide postgraduate researchers with guidance on selecting and applying sociotechnical theories to the study of information systems including how they can be combined to complement each other Until now it has been difficult to source advice on

the application of these theories and there has been no single book that combines multiple theories as this does Examining the impacts of technological developments and seeking to understand how humans interact with computers and systems is a dynamic field but can often confuse researchers with the overwhelming number of social theories that are utilised to derive insights Instead the author in this book breaks down some of the most popular theories used to underpin information system research such as activity theory AT actor network theory ANT contingency theory CT diffusion of innovation DOI theory structuration theory ST and the technology acceptance model TAM By doing so this book serves to enable a simpler faster selection of appropriate theories and a more effective and productive application that leads to richer more rigorous research outcomes Written for postgraduates researchers and academics in the fields of information technology and information systems this book provides a valuable resource of sociotechnical research methodologies that will enable and enhance future studies
