An Epidemic of Absence Moises Velasquez-Manoff, 2012-09-04 Whether it is asthma food or pollen allergies type 1 diabetes lupus multiple sclerosis or Crohn's disease everyone knows someone who suffers from an allergic or autoimmune disorder And if it appears that the prevalence of these maladies has increased recently that's because it has to levels never before seen in human history These days no fewer than one in five and likely more Americans suffer from one of these ailments We seem newly and bafflingly vulnerable to immune system malfunction Why Science writer Moises Velasquez Manoff explains the latest thinking about this problem and explores the remarkable new treatments in the works In the past 150 years improved sanitation water treatment and the advent of vaccines and antibiotics have saved countless lives nearly eradicating diseases that had plagued humanity for millennia But now a growing body of evidence suggests that the very steps we took to combat infections also eliminated organisms that kept our bodies in balance The idea that we have systematically cleaned ourselves to illness challenges deeply entrenched notions about the value of societal hygiene and the harmful nature of microbes Yet scientists investigating the rampant immune dysfunction in the developed world have inevitably arrived at this conclusion To address this global epidemic of absence they must restore the human ecosystem
