Building workflows in a declarative fashion and hosting them as services is a natural way for building business logic that is tiered away from running applications that subscribe to them, therefore providing flexibility for when business processes change. In Pro WF 4.5, author Bayer White walks you as the developer through the steps and explains the concepts of declaratively modeling domain specific business processes that can be hosted and exposed as services either on premise or as cloud services within Windows Azure. Gives you a practical knowledge of WF 4.5, Windows Server and Azure AppFabric. Builds a foundation for building workflows that can be exposed on premise or in the cloud. Shows how to use the tools available for managing workflow services.
