Time And Space:

Time and Space Barry Dainton, 2016-04-15 The first edition 2001 of this title quickly established itself on courses on the philosophy of time and space This fully revised and expanded new edition sees the addition of chapters on Zeno's paradoxes speculative contemporary developments in physics and dynamic time making the second edition once again unrivalled in its breadth of coverage Surveying both historical debates and the ideas of modern physics Barry Dainton evaluates the central arguments in a clear and unintimidating way and is careful to keep the conceptual issues throughout comprehensible to students with little scientific or mathematical training The book makes the philosophy of space and time accessible for anyone trying to come to grips with the complexities of this challenging subject With over 100 original line illustrations and a full glossary of terms the book has the requirements of students firmly in sight and will continue to serve as an essential textbook for philosophy of time and space courses

The Large Scale Structure of Space-Time Stephen Hawking, G. F. R. Ellis, 1973 This 1973 book discusses Einstein's General Theory of Relativity and its predictions concerning black holes and singularities in space time itself

A Treatise on Time and Space J. R. Lucas, 2018-10-10 Originally published in 1976 This comprehensive study discusses in detail the philosophical mathematical physical logical and theological aspects of our understanding of time and space The text examines first the many different definitions of time that have been offered beginning with some of the puzzles arising from our awareness of the passage of time and shows how time can be understood as the concomitant of consciousness In considering time as the dimension of change the author obtains a transcendental derivation of the concept of space and shows why there has to be only one dimension of time and three of space and why Kant was not altogether misguided in believing the space of our ordinary experience to be Euclidean The concept of space time is then discussed including Lorentz transformations and in an examination of the applications of tense logic the author discusses the traditional difficulties encountered in arguments for fatalism In the final sections he discusses eternity and the beginning and end of the universe The book includes sections on the continuity of space and time on the directedness of time on the differences between classical mechanics and the Special and General theories of relativity on the measurement of time on the apparent slowing down of moving clocks and on time and probability

Space, Time, and Spacetime Lawrence Sklar, 1977-03-15 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy The arguments are set forth step by step beginning from first

principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

The Invention of Time and Space Patrice F. Dassonville, 2016-09-30 This investigation of time and space is motivated by gaps in our current understanding by the lack of definitions by our failure to appreciate the nature of these entities by our inability to pin down their properties The author's approach is based on two key ideas The first idea is to seek the geo-historical origins of time and space concepts A thorough investigation of a diversified archaeological corpus allows him to draft coherent definitions it furthermore gives clues as to whether time and space were discovered or invented The second idea is to define the units before trying to define space and time The results presented here are unexpected Time and space were not discovered in nature but they were invented time is not a phenomenon and space has no materiality they are only concepts This runs contrary to the opinion of most scientific and the philosophical authorities although one would seek in vain for a theoretical validation of the conventional position This book will provide much food for thought for philosophers and scientists as well as interested general readers

Space, Time and Einstein J. B. Kennedy, 2003 This work covers the philosophical heart of the issues of space and time It introduces the revolutionary ideas of Einstein along with the concepts and arguments of philosophers both ancient and modern which have proved of lasting value The text serves to introduce the subject for beginning students as well as provide a clear statement of the state of the debate for a popular science readership Topics include Einstein's special and general relativity how to build an atom bomb the four dimensional universe the possibility of time travel the impossibility of motion whether space curves the big bang black holes as well as an inflationary and accelerating universe

Time, Space and Things B. K. Ridley, 1995-03-31 Brian Ridley's book sets out to survey in simple non-mathematical terms what physics has to say about the fundamental structure of the universe

Space and Time in Contemporary Physics, an Introduction to the Theory of Relativity and Gravitation - Primary Source Edition Moritz Schlick, Henry L. Brose, 2013-12

Space and Time Emile Borel, 2003-01-01 Accessible classic by a world famous mathematician covers geometry and the shape of the earth space and time in astronomy abstract geometry and geographical maps continuity and topology the propagation of light the special and general theories of relativity and theoretical and experimental researches 1926 edition Includes 15 figures

Space And Time, Matter And Mind Wolfram Schommers, 1994-10-10 In principle the elements of space and time cannot be measured Therefore the following question arises How are reality and space-time related to each other In this book it is argued on the basis of many facts that reality is not embedded but projected onto space and time We can never make statements about the actual reality outside basic reality but we can only form pictures of it These are pictures of the same reality on different levels From this point of view the hard objects matter and the products of the mind are similar in character

Knowledge, Space, Economy John Bryson, Peter Daniels, Nick Henry, Jane Pollard, 2002-01-04 We are now living through a period of knowledge capitalism in which as Castells put it the action of knowledge upon knowledge is the main source of productivity In the face of such transformation the

economic social and institutional contours of contemporary capitalism are being reshaped At the heart of this world are an emergent set of economies regions institutions and peoples central of the flows and translations of knowledge This book provides an interdisciplinary review of the triad of knowledge space economy on entering the twenty first century Drawing on a variety of disciplinary backgrounds the first part of the book comprises a set of statements by leading authors on the role of knowledge in capitalism Thereafter the remaining two parts of the book explore the landscape of knowledge capitalism through a series of analyses of knowledge in action within a range of economic political and cultural contexts Bringing together a set of authors from across the social sciences this book provides both a major theoretical statement on understanding the economic world and an empirical exemplification of the power of knowledge in shaping the spaces and places of today s society

Space-time and Beyond Bob Toben,Fred Alan Wolf,1982 *Space, Time, Matter* Hermann Weyl,2017-10-21 Hermann Weyl s classic and in depth discussion of physics the universe and the theory of relativity including diagrams and illustrations *Time Travel in Einstein's Universe* J. Richard Gott,2002 Discusses the scientific possibility of time travel uses the concept of time travel to examine the origin of the universe and explores the future of human existence **Space, time and gravitation** Sir Arthur Eddington,1966 The New Media Theory Reader Hassan, Robert,Thomas, Julian,2006-09-01 The study of new media opens up some of the most fascinating issues in contemporary culture bringing together key readings on new media what it is where it came from how it affects our lives and how it is managed It encourages readers to pay attention to the new in new media as well as consider it as a historical phenomenon

Space, Time, and Einstein J. B. Kennedy,John Bernard Kennedy,2003 An enlightening introduction to the philosophy of time and space J B Kennedy offers an introduction to one of the liveliest and most popular fields in philosophy time and space aimed specifically at a beginning readership with no background in philosophy or science He goes to the philosophical heart of the issues without recourse to jargon mathematics or logical formulas and introduces Einstein s revolutionary ideas in a clear and simple way as well as concepts and arguments of other relevant philosophers both ancient and modern Current debates in philosophy and physics are also handled with exemplary clarity and Kennedy is able to provide readers with a real sense of where we have come from and where we are going The writing is engaging lively and entertaining and serves to introduce the subject to beginning students as well as providing a clear statement of the state of the debate for a popular science readership Kennedy covers such topics as Einstein s special and general relativity how to build an atom bomb the four dimensional universe the possibility of time travel the impossibility of motion whether space curves the big bang black holes and the idea of inflationary and accelerating universes **The Absolute Relations of Time and Space** Alfred A. Robb,2015-08-28 In my smaller book *The Absolute Relations of Time and Space* I gave an abbreviated account of this work and added an appendix showing how the various complicated geometries which are treated of in Einstein s generalized relativity could be obtained by means of a modified measure of interval However most relativists have been too busily

engaged in praising Einstein to spare the time to go into my work One result of this has been that by taking the idea of measurement as the fundamental thing a very large number if not the majority of relativists have fallen into the very serious error of asserting that the length of what they call a world line is a minimum between any two points of it In my Theory of Time and Space I showed p 360 that this is not correct Finding that a number of writers were making this mistake I wrote a letter which appeared in Nature February 5 1920 p 599 in which I invited attention to this matter and pointed out that in what I called inertia lines the length so far from being a minimum was actually a maximum in the mathematical sense while in what I called separation lines the length was neither a maximum nor a minimum In this letter I gave actual numerical examples to illustrate these points I invited attention to the matter again in my Absolute Relations of Time and Space p 71 published in 1920 In spite of these efforts of mine I again find this blunder cropping up in works published this year Now it seems to me that it is a very important point since in ordinary geometry there is no such thing as a longest line joining two points The idea would I think be apt to cause bewilderment in the mind of a person meeting it for the first time unless it were properly presented to him The idea of a straight line which was neither a maximum nor a minimum would I fancy cause even greater bewilderment and he would wish to know how such lines were to be defined In Einstein's generalized relativity the element of interval is taken as a starting point although the idea of an interval in the minds of many writers is so obscure that they ascribe a minimum property to it which it does not possess Although I have tried so often to impress on relativists that the ordinary method of treating space time theory is unsatisfactory I propose to make one more attempt to show that the measurement of intervals is not the simple thing that is so often supposed Let us consider the simple time space theory in which the length of an element ds of what I call a separation line is given by the formula $ds^2 = dx^2 + dy^2 + dz^2 - dt^2$ Let O be the origin of co ordinates and let P be any point on the axis of x at a distance l from O measured say in the positive direction Let $F(x)$ be any arbitrary differentiable function of x which is continuous and single valued and which is equal to zero for $x = 0$ and for $x = l$ Now consider the space time curve the equations of which are $y = t F(x)$ $z = 0$ It is evident that this curve passes through O and P But now we have $dy = dt F(x)$ $dz = 0$ $ds^2 = dx^2$ and so on Thus we have $ds = dx$ so the length measured along the space time curve from O to P is equal to the length of O to P measured directly along the axis of x That is it is equal to l Thus a space time curve the equation of which contain an arbitrary function can have the same length between two points as the direct length measured between those two points Nature Volume 110 1922

Philosophical Investigations on Time, Space and the Continuum (Routledge Revivals) Franz Brentano, 2009-10-15 Franz Brentano is recognised as one of the most important philosophers of the late nineteenth and early twentieth centuries This work first published in English in 1988 besides being an important contribution to metaphysics in its own right has considerable historical importance through its influence on Husserl's views on internal time consciousness The work is preceded by a long introduction by Stephan Körner in collaboration with Brentano's literary executor
