Paul R. Loconto

Winlab Icp Manual:

Marine Pollution Tobias N. Hofer, 2008 Marine pollution is the harmful effect caused by the entry into the ocean of chemicals or particles. An associated problem is that many potentially toxic chemicals adhere to tiny particles which are then taken up by plankton and benthos animals, most of which are either deposit or filter feeders, concentrating upward within ocean food chains. Also, because most animal feeds contain high fish meal and fish oil content, toxins can be found a few weeks later in commonly consumed food items derived from livestock and animal husbandry such as meat, eggs, milk, butter, and margarine. One common path of entry by contaminants to the sea are rivers. Many particles combine chemically in a manner highly depletive of oxygen, causing estuaries to become anoxic. This book presents the latest research in the field from around the world.

Laboratory Experiments in Trace Environmental Quantitative Analysis Paul R. Loconto, 2022-04-11 *Laboratory Experiments in Trace Environmental Quantitative Analysis* is a collection of student-tested experiments that introduce important principles that underlie various laboratory techniques in the field of trace environmental organics and inorganics quantitative analysis. It crosses the more traditional academic disciplines of environmental science and analytical chemistry. The text is organized to begin with minimally rigorous session experiments and increase in rigor as each session experiment unfolds. Each experiment features learning objectives, expected student outcomes, and suggestions for further study. Additional features include: Students are introduced to the principles and laboratory practice of instrumental analysis; determinative techniques that are clearly presented; Students are carefully taken through various ways to prepare samples for trace quantitative analysis; sample prep techniques; Safety warnings are listed within each experiment; Students are introduced to all three types of instrument calibration: external, internal, and standard addition; Instructors who are responsible for laboratory courses in analytical chemistry with potential application to environmental sample matrices will find this textbook of value; Graduate programs in environmental science and engineering will also greatly benefit from the content.

Trace Environmental Quantitative Analysis Paul R. Loconto, 2020-12-27 A thorough and timely update, this new edition presents principles, techniques, and applications in this sub-discipline of analytical chemistry for quantifying traces of potentially toxic organic and inorganic chemical substances found in air, soil, fish, and water, as well as serum, plasma, urine, and other body fluids. The author addresses regulatory aspects, calibration, verification, and the statistical treatment of analytical data, including instrument detection limits, quality assurance, quality control, sampling, and sample preparation and techniques that are used to quantify trace concentrations of organic and inorganic chemical substances. **Key Features:** Fundamental principles are introduced for the more significant experimental approaches to sample preparation; Principles of instrumental analysis; determinative techniques for trace organics and trace inorganics analysis; An introduction to the statistical treatment of trace analytical data; How to calculate instrument detection limits based on weighted least squares; confidence band calibration statistics; Includes an updated series of student-tested experiments.
