An IT and Security Comparison Decision Support System for Wireless LANs Kevin T. Reynolds,2004 Are all Wireless LANs equal A network administrator is faced with a plethora of wireless services complex radio issues and products for wireless data There are brand new protocols and products that could become obsolete a day after installation Over 40% of all deployed WLANs do not even have minimum security activated exposing the company s network and records to easy outsider access The WLAN industry is characterized by rapidly changing incomplete or proprietary standards which can impact interoperability goals There are complicated ownership costs performance limitations and security configurations that exist for WLANs which many network administrators may not understand or know how to compare This dissertation presents a decision support system DSS that enables a novice network administrator to compare WLAN protocol capabilities rank security configurations rate IT cost efforts and use an extensive feature list An in depth discussion concerning WLAN protocols virtual private networks VPNs various encryption algorithms 802 1X authentication mechanisms and compilation of network selection criteria provides the foundation to construct a small DSS to aid WLAN network administrators The DSS uses a set of rules to evaluate a series of potential requirements and provides pertinent WLAN decision making information The DSS environment allows a number of specific what if scenarios to be reviewed and compared multiple solutions can be tried without having to deal with the consequences Alternative technologies are listed by the DSS to educate the decision maker about other options

Mobile Networking with WAP
SCN Education B.V., 2013-11-11 Inspiration for the wireless revolution The big Geneva Telecom 99 exhibition will probably go down in history as the moment when Wireless Application Protocol WAP made its debut in the world A slew of vendors launched their first WAP phones and carriers announced their first WAP services And this time it's Europe that's the frontrunner For once I'm not proud to be an American said Larry Ellison the CEO of softwaremaker Oracle in a speech delivered at Telecom 99 Europe is at least 18 months ahead of the United States in deploying WAP The Telecom 99 show could mark the beginning of a bright very bright future for WAP Analysts predict that a significant part of Internet access will be via wireless devices within a few years It's important not to get carried away When the computer industry gets hold of a new concept like WAP it becomes the Next Big Thing Vendors pre-announce products and the mass media prints hype When the revolution fails to materialize during the following months the hype will die soon But this time it's different The business

case is overwhelming the numbers are staggering and it's the cash loaded telecom industry that is delivering the key products

Guide to Wireless Network Security John R. Vacca, 2006-10-16

1 INTRODUCTION With the increasing deployment of wireless networks 802.11 architecture in enterprise environments IT enterprises are working to implement security mechanisms that are equivalent to those existing today for wire based networks An important aspect of this is the need to provide secure access to the network for valid users Existing wired network jacks are located inside buildings already secured from unauthorized access through the use of keys badge access and so forth A user must gain physical access to the building in order to plug a client computer into a network jack In contrast a wireless access point AP may be accessed from off the premises if the signal is detectable for instance from a parking lot adjacent to the building Thus wireless networks require secure access to the AP and the ability to isolate the AP from the internal private network prior to user authentication into the network domain Furthermore as enterprises strive to provide better availability of mission critical wireless data they also face the challenge of maintaining that data's security and integrity While each connection with a client a supplier or a enterprise partner can improve responsiveness and efficiency it also increases the vulnerability of enterprise wireless data to attack In such an environment wireless network security is becoming more important every day Also with the growing reliance on e commerce wireless network based services and the Internet enterprises are faced with an ever increasing responsibility to protect their systems from attack
