Space Division Multiple Access for Wireless Local Area Networks Patrick Vandenameele, Liesbet Van Der Perre, Marc Engels, 2006-04-18 Wireless Local Area Networks WLANs are experiencing a growing importance recently Whereas WLANs were primarily used for niche applications in the past they are now deployed as wireless extensions to computer networks The increase of the data rates from 2 Mbps up to 11 Mbps for roughly a constant price has played a major role in this breakthrough As a consequence an even greater success can be envisioned for the more recent OFDM based WLAN standards in the 5 GHz band that offer up to 54 Mbps At IMEC we have realized this potential already several years ago and have established a successful research program on OFDM based WLAN The program resulted in an operational prototype of a 5 GHz OFDM system The longer term goals of this program are to extend the indoor range of the WLAN systems up to 100 m and to increase the capacity above 100 Mbps Driven by these goals Patrick embarked on the usage of multiple antenna techniques and more in particular Space Division Multiple Access

SDMA for WLAN as the topic for his doctoral research During this research key contributions were made towards making SDMA for WLAN a reality To name a few A basic scheme for combining OFDM and SDMA was proposed Also realistic non linear detection methods were developed These methods achieve a high implementation efficiency by exploiting the parallelism of the data model and the frequency selectivity of the propagation channel

Medium Access Control in Wireless Networks Hongyi Wu, Yi Pan, 2008 Wireless technologies and applications are becoming one of the fastest growing and most promising areas in recent years To accommodate data transmission by multiple stations sharing the scarce wireless bandwidth a medium access control MAC protocol plays a crucial role in scheduling packet transmission fairly and efficiently The emerging wireless networks such as ad hoc networks sensor networks or mesh networks are mostly multi hop based and in distributed manner which brings a lot of problems and challenges in designing fine tuned MAC protocols tailored for modern wireless network In this book the authors give complete and in depth overviews to the classic medium access control algorithms and the related protocols as well as their applications in various wireless data networks especially the most successful Wireless Local Area Networks WLAN The book consists of three major parts Part I of this book including Chapters 1-7 is emphasising on the fundamentals of medium access control algorithms and protocols Chapter 1 provides an introduction to the wireless networks such as overview of wireless networks problems and challenges of the wireless networks and the classifications of MAC protocols as well as the performance metrics Chapter 2 introduces important collision resolution algorithms applied in medium access controls for example the splitting algorithm and the backoff algorithm Chapter 3 reviews the hybrid access control algorithms that combine both contention and allocation schemes A series of important collision avoidance schemes are introduced in Chapters 4-7 respectively with a specific design goal covered in each chapter Chapter 4 focuses on the multi channel MAC protocols for collision avoidance Chapter 5 introduces the concepts of power control and power management in medium access control and how they can be applied in MAC protocol design Chapter 6 presents how to provide Quality of Service QoS to multimedia wireless networks in either centralised or distributed manner and Chapter 7 explains how the smart antennas can be applied in the medium access control to provide high channel throughput and low packet collision
