Throughout the book, appropriate command prompts are employed to identify the lab system and user to run a command. Each command and task presented in the book was actually performed and tested on lab systems. Followed by the lab environment setup in Part One, the book presents the essentials of Linux, including interaction with Linux basic commands, file management, permissions, ownership, linking, searching, special permissions, editing, filter programs, regex, shell features, and process handling. Subsequent topics focus on system administration, including shared libraries, Debian and RPM package management, system boot and initialization, hardware management, kernel modules, storage partitioning, file system creation and repairs, quota handling, and swap space administration.
