Shells 2012 Alaska Offshore Oil And Gas Exploration Program:

Shells 2012 Alaska Offshore Oil and Gas Exploration Program U.S. Department of the Interior, 2014-10-22 Last year Shell attempted a long planned exploratory drilling program offshore Alaska in the Beaufort and Chukchi Seas Shell's goal for the summer drilling season was to confirm a major discovery of oil in commercially viable quantities in the Alaskan Arctic Ocean Shell was not able to achieve its goal and did not complete any exploration wells last summer The company experienced major problems with its 2012 program some of which have been well publicized Shell's difficulties have raised serious questions regarding its ability to operate safely and responsibly in the challenging and unpredictable conditions offshore Alaska As a result Secretary of the Interior Ken Salazar ordered this review of Shell's 2012 Alaska offshore drilling program in the Beaufort and Chukchi Seas The purpose of this review is to assess at a high level Shell's performance across all aspects of its 2012 Alaska offshore exploration program identify key lessons to be learned from Shell's experience and make recommendations applicable to any future exploration drilling operations that may be proposed for the Arctic Outer Continental Shelf OCS The Secretary directed that this report and its accompanying findings and recommendations be completed within 60 days This review has confirmed that Shell entered the drilling season not fully prepared in terms of fabricating and testing certain critical systems and establishing the scope of its operational plans The lack of adequate preparation put pressure on Shell's overall operations and timelines at the end of the drilling season Indeed because Shell was unable to get certified and then deploy its specialized Arctic Containment System ACS which the Department of the Interior DOI required to be on site in the event of a loss of well control the company was not allowed to drill into hydrocarbon bearing zones Shell's failure to deploy the ACS system was due in turn to shortcomings in Shell's management and oversight of key contractors Likewise additional problems encountered by Shell including significant violations identified during United States Coast Guard's USCG inspection of the Noble Discoverer drilling rig in Seward last November the lost tow and grounding of the Kulluk rig near Kodiak Island in late December and violations of air emission permits issued by the Environmental Protection Agency EPA also indicate serious deficiencies in Shell's management of contractors as well as its oversight and execution of operations in the extreme and unpredictable conditions offshore of Alaska Although Shell's difficulties prevented the company from fully executing its drilling plans last summer the company successfully completed some important elements of its drilling program In particular Shell succeeded in drilling top hole sections of two wells in the Arctic Ocean and it did so safely without any significant injuries to workers or spills Shell employed weather forecasting and ice management systems that enabled it to respond effectively to changing sea ice conditions including the encroachment of a major ice floe on Shell's Burger A well site in the Chukchi Sea Shell also coordinated well with Alaska Native communities and subsistence hunters even under circumstances that delayed its drilling program in the Beaufort Sea Offshore Oil and Gas Development in the Arctic under International Law Rachael Lorna Johnstone, 2015-01-08 Offshore Oil and Gas

Development in the Arctic under International Law explores the international legal framework for hydrocarbon development in the marine Arctic. It presents an assessment of the careful balance between States' sovereign rights to their resources, their obligations to uphold the rights of Arctic inhabitants and their duty to prevent injury to other States. It examines the rights of indigenous and other Arctic populations, the precautionary approach, the environmental impact assessment and the duty to monitor offshore hydrocarbon activities. It also analyses the application of the international law of responsibility in the event that the State fails to meet its primary obligations in the absence of a State's wrongful conduct. **Assessing U.S.**

Preparedness and Response in the Arctic United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Oceans, Atmosphere, Fisheries, and Coast Guard, 2013. **Joint Development of Offshore Oil and Gas Resources in the Arctic Ocean Region and the United Nations Convention on the Law of the Sea** John Abrahamson, 2018-08-13. The Arctic Ocean region presents certain challenges to peaceful cooperation between states, particularly in the locations where ocean boundaries and ownership of the related resources are disputed. The establishment of Joint Development Zones (JDZs) for the development of offshore oil and gas resources in the Arctic Ocean can facilitate international cooperation over resource development where there are competing claims. These claims are generally based on continental shelf jurisdiction under the provisions of the United Nations Convention on the Law of the Sea (UNCLOS). There are several alternative dispute resolution measures available under UNCLOS; however, a number of states have preferred to adopt a JDZ as an interim measure to allow development. The significance of JDZs for the Arctic Ocean region is that they can allow peaceful cooperation and development where the specific circumstances of Arctic claims make it difficult for the respective states to agree on the maritime boundary. *Preparing for Offshore Drilling in the Arctic* United States.

This book presents the latest scientific views on resource use conflicts in the Arctic seas. The main areas of focus are the biological resources of Arctic seas vs. exploitation of oil and gas resources and the conflicts in between. In addition, climate change is presented as a stressor which both limits and facilitates the economic availability of resources in the Arctic. The book is divided into five parts. Part 1 examines Arctic ecosystems, resilience of the marine environment and possible conflicts between industrial sector and biological world. The focus of Part 2 is on transport infrastructure along the northern routes. Issues such as Arctic maritime operations, black carbon and unmanned aerial vehicles are considered. Part 3 focuses on resource use conflicts in Arctic seas and on the most recent threats in terms of Arctic oil and gas exploration, offshore logistics operations as well as

transportation of oil and oil products Discussions in Part 4 of the book are concentrated around social aspects and involvement of local communities Tourism development preservation of indigenous culture engagement of communities on relevant Arctic issues search and rescue in the cold marine environment are examples of questions raised The book reviews Arctic specific petroleum regulations the state of preparedness to oil spill accidents in the region as well as the latest developments in oil spill response technologies and their limitations Search and rescue operations are reviewed and how working in this harsh Arctic environment affects the ability of rescue technicians to perform the required technical skills Part 5 considers the sustainability challenges arising from the marine resource exploitation The focus is on the vulnerability of Arctic ecosystems to disturbance both natural and anthropogenic
