The HPLC Expert II Stavros Kromidas, 2017-01-05 How can I use my HPLC/UHPLC equipment in an optimal way where are the limitations of the technique? These questions are discussed in detail in the sequel of the successful HPLC Expert in twelve chapters written by experts in the respective fields. The topics encompass complementary to the first volume: typical HPLC users' problems and questions such as gradient optimization and hyphenated techniques LC-MS. An important key aspect of the book is UHPLC. For which analytical problem is it essential, what should be considered? Besides presentation of latest developments directly from the main manufacturers, also UHPLC users and independent service engineers impart their knowledge. Consistent with the target groups, the level is advanced, but the emphasis is on practical applications.

Transcriptome & Metabolic Profiling: An Insight Into the Abiotic Stress Response Crosstalk in Plants Poonam Yadav, Guanlin Li, Jose M. Mulet, 2024-02-21 *Abiotic Stresses in Agroecology: A Challenge for Whole Plant Physiology* Mauro Centritto, 2017-07-04 Understanding plant responses to abiotic stresses is central to our ability to predict the impact of global change and environmental pollution on the production of food, feed and forestry. Besides increasing carbon dioxide concentration and rising global temperature, increasingly frequent and severe climatic events, e.g. extended droughts, heat waves, flooding, are expected in the coming decades. Additionally, pollution, e.g. heavy metals, gaseous pollutants such as ozone or sulfur dioxide, is an important factor in many regions, decreasing plant productivity and product quality. This research topic focuses on stress responses at the level of whole plants, addressing biomass-related processes, development of the root system, root respiration, fermentation, leaf expansion, stomatal regulation, photosynthetic capacity, leaf senescence, yield and interactions between organs, transport via xylem and phloem, long-distance signaling and secondary metabolites. Comparisons between species and between varieties of the same species are helpful to evaluate the potential for species selection and genetic improvement. This research topic is focused on the following abiotic stresses and interactions between them: Increased carbon dioxide concentration in ambient air is an important parameter influenced by global change and affects photosynthesis, stomatal regulation, plant growth and finally yield. Elevated temperature, both the steady rise in average temperature and extreme events of shorter duration (heat waves), must be considered in the context of alterations in carbon balance through increased photorespiration, decreased Rubisco activation.
