Shipwreck With Spectator Hans Blumenberg,1997 This elegant essay exemplifies Blumenberg's ideas about the ability of the historical study of metaphor to illuminate essential aspects of being human Originally published in the same year as his monumental *Work on Myth* *Shipwreck with Spectator* traces the evolution of the complex of metaphors related to the sea to shipwreck and to the role of the spectator in human culture from ancient Greece to modern times The sea is one of humanity's oldest metaphors for life and a sea journey Blumenberg observes has often stood for our journey through life We all know the role that shipwrecks can play in this journey and at some level we have all played witness to others' wrecks standing in safety and knowing that there is nothing we can do to help yet fixed comfortably or uncomfortably in our ambiguous role as spectator Through Blumenberg's seemingly inexhaustible knowledge of letters from ancient texts through nineteenth century reminiscences and modern speeches we see layer upon layer revealed in the meanings humans have given to these metaphors and in this way we begin to understand what metaphors can do that more straightforward modes of expression cannot This edition of *Shipwreck with Spectator* also includes *Prospect for a Theory of Nonconceptuality* an essay that recounts the evolution of Blumenberg's ideas about metaphorology in the years following his early manifesto *Paradigms for a Metaphorology*

Sailing School Margaret E. Schotte,2019-07-30 Hands on science in the Age of Exploration Winner of the John Lyman Book Award in Naval and Maritime Science and Technology by the North American Society for Oceanic History and the Leo Gershoy Prize by the American Historical Association Throughout the Age of Exploration European maritime communities bent on colonial and commercial expansion embraced the complex mechanics of celestial navigation They developed schools, textbooks and instruments to teach the new mathematical techniques to sailors As these experts debated the value of theory and practice, memory and mathematics they created hybrid models that would have a lasting impact on applied science In *Sailing School* a richly illustrated comparative study of this transformative period Margaret E. Schotte charts more than two hundred years of navigational history as she investigates how mariners solved the challenges of navigating beyond sight of land She begins by outlining the influential sixteenth century Iberian model for training and certifying nautical practitioners She takes us into a Dutch bookshop stocked with maritime manuals and a French trigonometry lesson devoted to the idea that navigation is nothing more than a right triangle The story

culminates at the close of the eighteenth century with a young British naval officer who managed to keep his damaged vessel afloat for two long months thanks largely to lessons he learned as a keen student This is the first study to trace the importance for the navigator s art of the world of print Schotte interrogates a wide variety of archival records from six countries including hundreds of published textbooks and never before studied manuscripts crafted by practitioners themselves Ultimately Sailing School helps us to rethink the relationship among maritime history the Scientific Revolution and the rise of print culture during a period of unparalleled innovation and global expansion **School Science** ,1903
