

Description

The 51008 mechanical diesel meter has an aluminium body incorporating an inlet and outlet flange and can meter diesel accurately between 15 and 120 L/min. Featuring an oscillating plate, the meter incorporates bypasses which enable the meter to be used on diesel of varying viscosity's. The meter features rotational inlet/outlet for vertical or horizontal applications. The meter includes a set of resettable digits that need to be reset to zero before the meter is to be used to record its next batch reading. The meter can be supplied with a 1" BSP (F) filter, an optional extra (Part No. 51008F) or without the filter (Part No. 51008L).

Specifications

Suitable for	Measuring the transfer of diesel
Flow rate	20 L/min to 120 L/min
Maximum Pressure	3 bar (50psi)
Weight	2.0kg Accuracy $\pm 1.0\%$
Inlet/Outlet connections	1" BSP (F)

Operating Instructions

1. Configure the meter in an orientation that suits your application i.e.: by undoing screws at the base of the meter and reorientate the meter so that the inlet and outlet of the meter suit your application.
2. Connect the meter inlet to the hose or fixed fitting that the product is being delivered through.
3. Once threads connected and completely sealed with thread tape, open the tank's on/off valve or start up the pump.
4. Diesel will now start to flow through the mechanical flow meter turning over the batch recording digits and totaliser recording digits.

Important To Note:

The 51008 and 51008F fuel meters are pre-calibrated in factory to be used with diesel fuel. As specific operating conditions (such as real flow rate, the viscosity and temperature of the measured fluid) may affect the meter accuracy, a recalibration should be carried out after the installation has been completed. A new calibration is necessary each time the meter is disassembled for maintenance operations or when it is used to measure fluids that differ from diesel fuel.

Calibration Procedure

1. Unscrew the plug (Part No. 51008-16).
2. Purge the system (pump, pipelines, meter) of air by dispensing until the flow of diesel is full and steady.
3. Stop the flow by shutting off the nozzle, but keep the pump running.
4. Reset the batch register by means of the reset knob (Part No. 51008-21).
5. Dispense at the flow rate which the best accuracy is required of, by using a calibration container having a capacity not less than 20L. Do not reduce the flow in order to reach the graduated zone of the calibration container. The right way to do this is to start and stop the flow rate repeatedly until the required filling is obtained.
6. Compare the indication of the calibration with the one of the meter. If the indicated value is higher than the real value, loosen the screw (Part No. 51008-13) if the indicated value is lower than the real value, tighten the screw (Part No. 51008-13).
7. Repeat the operations 4 to 6 until accuracy is satisfactory.
8. Tighten the plug (Part No. 51008-16) again. The O-Ring (Part No. 51008-11) which the calibration screw is provided with has the function to avoid accidental loosening of the adjustment screw but does not facilitate any sealing function.
