37-MM Gun in World War II Charles C Roberts,2023-11-30 These photos are high quality and many focus on specific
components further enhancing the value of this book for modelers Armorama Developed in response to the 1899 Hague
Convention the 37 mm gun met the restrictions on the size of weapons that could fire explosive shells yet was also light and
lethal enough to be used in battle After World War I in which the French Model 1916 37 mm was used extensively several
countries developed or adopted the 37 mm gun Behind in their development of an antitank gun the United States relied on
the German Pak 36 37 mm design as a basis for development By the mid 1930s the US Ordnance Department designed the
M3 37 mm gun and M4 carriage resulting in a towed antitank gun the first antitank gun in the US Army This gun proved
effective at the beginning of World War II but as German armor protection increased it could not penetrate the frontal armor
of many German tanks and was relegated to lesser roles However the gun proved effective against the Japanese tanks and
Japanese strong points in the Far East The US military used the gun on several production and experimental armored
vehicles including the M3 Lee Medium Tank the M3 Stuart Light Tank the M5 Stuart Light Tank the M8 Armored Car the
T17E1 Staghound Armored Car and the M3A1E3 Scout Car The gun was also used on several non armored vehicles the P39
Aeracobra and selected naval vessels Despite its small size the US M3 37 mm gun served throughout the war on many
vehicles and performed exactly as designed Fully illustrated this is the first complete account of the development and use of
