future enrollments **Technical Drawing 101 with AutoCAD 2023** Ashleigh Congdon-Fuller, Antonio Ramirez, Douglas Smith, 2022-09-17 Technical Drawing 101 covers topics ranging from the most basic such as making freehand multiview sketches of machine parts to the advanced creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5 2009 Dimensioning and Tolerancing standard. But unlike the massive technical drawing reference texts on the market, Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty and assimilated by students in one semester. Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal. The authors have also created extensive video training: 178 videos, 26 hours total, that is included with every copy of the book. In these videos, the authors start off by getting students comfortable with the user interface and demonstrating how to use many of AutoCAD's commands and features. The videos progress to more advanced topics where the authors walk students through completing several of the projects in the book. The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup, units, limits, and layers, the tools of the Draw, Modify, and Dimension toolbars, and the fundamentals of 3D modeling. By focusing on the fundamental building blocks of CAD, Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and techniques: paper space, viewports, xrefs, annotative scaling, etc. in intermediate CAD courses. In recognition of the diverse career interests of our students, Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. We include architectural drawing because our experience has shown that many, if not most, first semester drafting students are interested in careers in the architectural design field and that a traditional technical drawing text which focuses solely on mechanical drawing projects holds little interest for these students. The multidisciplinary approach of this text and its supporting materials are intended to broaden the appeal of the curriculum and increase student interest, and it is hoped future enrollments will increase.

Indexing and Retrieval of Non-Text Information Diane Rasmussen Neal,2012-10-30 The scope of this volume will encompass a collection of research papers related to indexing and retrieval of online non text information In recent years the Internet has seen an exponential increase in the number of documents placed online that are not in textual format These documents appear in a variety of contexts such as user generated content sharing websites social networking websites etc and formats including photographs videos recorded music data visualizations etc The prevalence of these contexts and data formats presents a particularly challenging task to information indexing and retrieval research due to many difficulties such as assigning suitable semantic metadata processing and extracting non textual content automatically and designing retrieval systems that speak in the native language of non text documents
