Technical Manual Documentation:

Technical Documentation Best Practices - Visually Designing Modern Help Systems and Manuals Marc Achteleg, 2020-10-25 Aesthetics isn't the only thing that you should be striving for when designing a user manual template or the style sheet of an online help system. When creating technical documentation, usability, readability, and simplicity are at least just as crucial. The design should please the eye, but at the same time, it must communicate the content clearly. In addition, paragraph styles and character styles should be efficient to use for the author when writing the document. The layout process should be automated as much as possible. Because most user assistance documents are frequently updated during their life cycle, an automated layout process is much more important here than with other kinds of literature. Setting up templates and style sheets that are efficient to use when creating and updating user assistance requires a lot of experience in technical writing. The rules presented in this book are the essence of this experience. All chapters provide various examples that you can use for inspiration and as starting points for your own designs. Topics covered: Layout basics, Setting the type area, Choosing fonts and spacing, Creating semantic styles, Organizing styles hierarchically, Recommended screen layouts, Recommended page layouts, Recommended table designs, Recommended paragraph styles, Recommended character styles.

Translating Technical Documentation Without Losing Quality Marc Achteleg, 2012 Translating technical documentation such as user manuals, online help, and other types of user assistance is essentially different from translating other forms of documents. If you translate technical documentation in the same way as you translate other texts, chances are that your clients, mostly technical writers, will be quite unhappy with the results. For example, complex language that makes a novel or sales brochure interesting can be exactly what makes a user manual incomprehensible. When translating technical documentation, you should understand how your clients have designed their documents for clearness and simplicity. Only then can your translation reflect the same principles. This book provides you with a compilation of the basic technical writing rules that every technical writer follows. When you adhere to the same rules as you translate, it's almost guaranteed that both writers and readers will be happy with the quality of your work. Audience: Professional translators. *Technical Writing 101*

User Guides, Manuals, and Technical Writing Adrian Wallwork, 2014-06-19 This book is intended for anyone whose job involves writing formal documentation. It is aimed at non-native speakers of English but should also be of use for native speakers who have no training in technical writing. Technical writing is a skill that you can learn, and this book outlines some simple ideas for writing clear documentation that will reflect well on your company, its image, and its brand. The book has four parts: Structure and Content. Through examples, you will learn best practices in writing the various sections of a manual and what content to include. Clear Unambiguous English. You will learn how to write short, clear sentences and paragraphs whose meaning will be immediately clear to the reader. Layout and Order. Information. Here you will find guidelines on style issues, e.g., headings, bullets, punctuation, and capitalization. Typical Grammar and Vocabulary.

Mistakes This section is divided alphabetically and covers grammatical and vocabulary issues that are typical of user manuals

Even the best information is worthless if users can't find it Providing user friendly structure and navigation is just as important as providing well written content However structuring user assistance isn't as simple and obvious as it may seem If you think that your document structure should follow the structure of your product's components and functions You're wrong If you think that the type of document that you prefer is the same type of document that your clients prefer You're wrong If you think that all the information that you have is important You're also wrong This book tells you how to structure index and link your documents so that readers actually find the information they need Topics covered General structuring principles that all structural decisions have in common Choosing media Should you provide a printed or printable user manual PDF online help or both What information should go into the user manual and what information should go into online help Which help format should you use Can context sensitive help calls be implemented Should you provide interactive features Planning documents Should you put all information into one document or should you supply several user manuals for specific purposes and user groups How should you name your documents Planning document sections What are the major sections that your documents should consist of Are there any standard sections that you mustn't forget Planning topics What types of information do your clients need How should you build and name the individual topics within the document Planning the order of sections and topics How should you organize the sections and topics within your documents What comes first What comes later Planning navigation Which navigational devices should you provide in printed documents and in online help systems Where should you
