Edwards, John Magee, W.H.C. Bassetti, 2012-11-28 Sixty three years Sixty three years and Technical Analysis of Stock Trends still towers over the discipline of technical analysis like a mighty redwood Originally published in 1948 and now in its Tenth Edition this book remains the original and most important work on this topic The book contains more than dry chart patterns it passes down accumulated experience and wisdom from Dow to Schabacker to Edwards and to Magee and has been modernized by W H C Bassetti Bassetti a client friend and student of John Magee one of the original authors has converted the material on the craft of manual charting with TEKNIPLAT chart paper to modern computer software methods In actuality none of Magee's concepts have proven invalid and some of his work predated modern concepts such as beta and volatility In addition Magee described a trend following procedure that is so simple and so

elegant that Bassetti has adapted it to enable the general investor to use it to replace the cranky Dow Theory This procedure called the Basing Points procedure is extensively described in the new Tenth Edition along with new material on powerful moving average systems and Leverage Space Portfolio Model generously contributed by the formidable analyst Ralph Vince author of Handbook of Portfolio Mathematics See what's new in the Tenth Edition Chapters on replacing Dow Theory Update of Dow Theory Record Deletion of extraneous material on manual charting New chapters on Stops and Basing Points New material on moving average systems New material on Ralph Vince's Leverage Space Portfolio Model So much has changed since the first edition yet so much has remained the same Everyone wants to know how to play the game The foundational work of the discipline of technical analysis this book gives you more than a technical formula for trading and investing it gives you the knowledge and wisdom to craft long term success

Finance and Psychology - A never-ending love story?! Behavioural Finance and its impact on the credit crunch in 2009 Patrick Kemtzian, 2015-02-01 In the last decades many financial crises have emerged like the stock crash of 1987 the Asian crisis in 1997 and the global financial crisis that started in 2008 Although those crises occurred for different reasons they all proved financial markets to be inefficient Not all traders think rationally Behavioural patterns cause irrationality amongst traders Even after decades of research in this field financial crises like the latest one in 2008 still develop out of a combination of different behavioural patterns like herding As a consequence those patterns deserve an in depth analysis that is conducted by the author in this work In order to find out to what extent behavioural finance influences the decision making process of traders and investors the seven most relevant behavioural patterns have been identified and analysed through qualitative research in form of primary research The informal interview with the sophisticated trader Thomas Vittner serves as empirical evidence for the significance of the determined behavioural patterns To find out whether public investors and traders showed a herding behaviour towards analysts stock recommendations in the financial crisis and its recovery quantitative research has been made by conducting an experiment Stocks performances in relation to analysts recommendations were analysed and evaluated The author's selected behavioural patterns are influencing traders and investors decision making processes to a large extent as their majority trades irrationally The herding behaviour to follow analysts stock recommendations only holds partially in the crisis and in the recovery phase The results show that whereas the majority of analysts recommendations matched with market trends before the crisis only about half matched during the crisis and its recovery People tended to follow the general signals of the market rather than to recommendations given by analysts
