Technology in Financial Markets Marco Dell'Erba, 2024-01-16 In recent years technology has emerged as a disruptive force in the economy and finance leading to the establishment of new economic and financial paradigms Focusing on blockchain technology and its implementations in finance *Technology in Financial Markets* proposes a novel theoretical approach to disruption Relying on complexity science it develops a dynamic perspective on the study of disruptive phenomena and their relationship to financial regulation and the law It identifies the intrinsic interconnections characterizing the multidimensional technology driven transformations involving commercial practices capital markets corporate governance central banking and financial networks From this perspective it considers the way they are reflected at the level of contract law financial law corporate law central banking law The book adopts a unique comparative approach and explains and clarifies the factual and historical dimensions underlying the emergence of the crypto economy In this book blockchain is used as a case study Blockchain exemplifies the way each subpart of the financial system commercial practices financial markets corporations central banking networks and consequently each subcategory of financial regulation evolves on an individual basis It shows how such subparts evolve altogether bringing systemic transformations and ultimately leading to the creation of new economic and financial paradigms The book considers both these perspectives analysing the evolution of each subpart and emphasizing the interconnected transformations In doing this it adopts the structure of an ascending climax starting from contracts and escalating to increasingly broad dimensions in particular capital markets corporate governance central banking and financial networks

Expert Systems in Finance Noura Metawa, Mohamed Elhoseny, Aboul Ella Hassanien, M. Kabir Hassan, 2019-05-10 Throughout the industry financial institutions seek to eliminate cumbersome authentication methods such as PINs passwords and security questions as these antiquated tactics prove increasingly weak Thus many organizations now aim to implement emerging technologies in an effort to validate identities with greater

certainty The near instantaneous nature of online banking purchases transactions and payments puts tremendous pressure on banks to secure their operations and procedures In order to reduce the risk of human error in financial domains expert systems are seen to offer a great advantage in big data environments Besides their efficiency in quantitative analysis such as profitability banking management and strategic financial planning expert systems have successfully treated qualitative issues including financial analysis investment advisories and knowledge based decision support systems Due to the increase in financial applications size complexity and number of components it is no longer practical to anticipate and model all possible interactions and data processing in these applications using the traditional data processing model The emergence of new research areas is clear evidence of the rise of new demands and requirements of modern real life applications to be more intelligent This book provides an exhaustive review of the roles of expert systems within the financial sector with particular reference to big data environments In addition it offers a collection of high quality research that addresses broad challenges in both theoretical and application aspects of intelligent and expert systems in finance The book serves to aid the continued efforts of the application of intelligent systems that respond to the problem of big data processing in a smart banking and financial environment
