Lock, Stock, and Barrel Clayton E. Cramer, 2018-02-21 This provocative book debunks the myth that American gun culture was intentionally created by gun makers and demonstrates that gun ownership and use have been a core part of American society since our colonial origins Revisionist historians argue that American gun culture and manufacturing are relatively recent developments They further claim that widespread gun violence was largely absent from early American history because guns of all types and especially handguns were rare before 1848 According to these revisionists American gun culture was the creation of the first mass production gun manufacturers who used clever marketing to sell guns to people who neither wanted nor needed

them However as proven in this first scholarly history of gun culture in early America gun ownership and use have in fact been central to American society from its very beginnings Lock Stock and Barrel The Origins of American Gun Culture shows that gunsmithing and gun manufacturing were important parts of the economies of the colonies and the early republic and explains how the American gun industry helped to create our modern world of precision mass production and high wages for workers **USITC Publication** ,1994 **Twenty-Five Centuries of Technological Change** J. Arn,2012-12-06 Group Technology GT as a manufacturing concept has gained steady interest within the machine building industry all over the world Originally it was used more or less only in the so called parts family manufacturing concept With growing opportunities for using the computer in the design process operating planning and layout planning the potential advantages became more and more obvious In order to implement GT successfully and with a view to improving the overall economic situation of a production company it is necessary to consider all aspects of the complete manufacturing system Experience has shown that in the first stage a general basis has to be formed This is done by a clear and practical definition of three GT manufacturing systems the development of a set of classification systems for work pieces working operations and manufacturing equipment and in building a data bank from which a data basis for the GT planning process can be evaluated A second stage of implementation then considers the particular aspects of GT These are firstly a concept for layout and investment planning based on a representative parts

spectrum secondly for application of the GT idea in the design process three similar types of parts are to be developed as a logical supplement to the standard and recurring parts practice thirdly a three stage process planning and work measurement system can be developed for the so defined spectrum of similar parts
