

FCAT Achiever's! Improving FCAT Performance for At Risk Students

Project Abstract

The Winter Haven Schools, in Winter Haven, FL is seeking a grant to expand our FCAT Achiever's program with the objective of helping all of our at risk students increase their over all FCAT skills and to function at grade level using the same classroom textbooks and materials as their peers. The objective is that by the end of the year the students will have at least doubled their reading speed, math comprehension, science comprehension, language comprehension, and will have improved their FCAT skills by one to two grade levels. The FCAT Achiever's program is based on the latest research on effective FCAT instruction. Funding in the amount of \$17,869 is requested for staff training and to purchase the required software and hardware for the school's resource room.

Statement of Need

Winter Haven Schools has 342 students, of which 59 have been determined to be at risk in their FCAT performance for a variety of reasons including learning disabilities, such as attention deficit disorder (ADD) and dyslexia, or other economic and language-based difficulties. Winter Haven Schools is eligible for Title I funds and if these students are not given an opportunity to improve their FCAT skills they are, as studies show, more likely to be truant and drop out of school.

Program Description

The Winter Haven FCAT Achiever's project will enable at risk students to improve their FCAT skills through utilization of five computers equipped with scanners and sensitive FCAT software. Students using this innovative FCAT system will be able to utilize all their classroom materials, including textbooks providing them access to the general curriculum. The students will increase their reading speed, math comprehension, & language comprehension which will help them obtain classroom subject proficiency. Included in the FCAT Achiever's project will be a day of training for the FCAT specialist and classroom teachers on the features and use of the Sunshine State Standards Mastery Program.

Sunshine State Standards Mastery Program

The Study Island Sunshine State Standards Mastery Program is specifically designed to help students master the content specified in the Sunshine State Standards. Study Island's focus on the Sunshine State Standards enables students to improve their performance in all skill areas tested on the FCAT in grades 3 through 12. Study Island also offers Math and Reading Skills for Kindergarten through 2nd Grade, Fine Arts, Health, and Technology for Elementary and Middle School, and High School Algebra II Skills Mastery products.

The user-friendly interface allows students to move through the program step-by-step. Each section has a pre-test and a post-test, as well as topics that cover each of the Sunshine State Standards. Topics consist of questions, answers, explanations, and lessons that address the specific skills required in order mastering the Sunshine State Standards.

the world This book explores these curious topics beginning from the origin of the Universe to the emergence of life the evolution from cells to brains the development of cognitive ability from perception and attention to reasoning and thinking how we interact with other humans by means of love and emotion to the creation of thinking machines by weird technology THIS BOOK presents novel views on these questions and provides explanations and possible answers in an easy to read style

What Makes Us Human Jasmine Wang,Iain S. Thomas,2022 A groundbreaking endeavor that explores human spirituality using the evolving technology of artificial intelligence People are at the Center of Any Technology Michael M Dediu,2022-05-15 What for we have technology For the benefit of all people There are many fundamental questions that all human beings are called to answer The most important philosophers including Socrates Plato Aristotle Descartes and Kant always asked profound questions and gave eternal answers Technology in different forms was created by talented people for long time and now continues to advance much faster This book discusses in detail this important subject using many questions giving complete responses emphasizing on the new ideas which will create the conditions for a peaceful free harmonious and prosperous world where people are the beneficiary and always at the center of any technology The future begins to take shape in front of our eyes and it is astonishingly beautiful **Surviving the Machine Age** Kevin Lagrandeur,James J Hughes,2019-04-06 This book examines the current state of the technologically caused unemployed and attempts to answer the question of how to proceed into an era beyond technological unemployment Beginning with an overview of the most salient issues the experts collected in this work present their own novel visions of the future and offer suggestions for adapting to a more symbiotic economic relationship with AI These suggestions include different modes of dealing with education aging workers government policies and the machines themselves Ultimately they lay out a whole new approach to economics one in which we learn to merge with and adapt to our increasingly intelligent creations **The Human Factor** Kim J. Vicente,2003 What links the frustrations of daily life like VCR clocks and voicemail systems to airplane crashes and a staggering hidden epidemic of medical error Kim Vicente is a professor of human factors engineering at the University of Toronto and a consultant to NASA Microsoft Nortel Networks and many other organizations he might also be described as a technological anthropologist He spends his time in emergency rooms airplane cockpits and nuclear power station control rooms as well as in kitchens garages and bathrooms observing how people interact with technology In the first chapter of The Human Factor Kim Vicente sets out the disturbing pattern he s observed from daily life to life or death situations people are using technology that doesn t take the human factor into account Technologies as diverse as stove tops hospital work schedules and airline cockpit controls lead to human error because they neglect what people are like physically psychologically and in more complex ways The results range from inconvenience to tragic loss of life How has this situation come about The root cause of the problem Vicente explains in the second chapter is a two cultures issue There is a divide in the world of technological design just as there is in the world more generally between humanistic and mechanistic world

views The humanistic view in say cognitive psychology deals with people in the abstract ignoring that using tools is an integral human activity The mechanistic view on the other hand forgets that it is real people who have to use the tools engineers develop The two groups aren't talking to each other as the author puts it our traditional ways of thinking have ignored and virtually made invisible the relationship between people and technology As is often the case in human factors engineering the solution is both revolutionary and on the surface simple what we have to do is focus on the relationship between people and technology Taking a cue from systems thinking Kim Vicente argues that we should focus not just on better products or better practices but the fit between them What this means is not the development of more high tech or low tech articles but a Human tech revolution where the human comes before the technological but the two are always linked In some areas the revolution is already at work it's not always the case that technology doesn't take the human factor into account When it does as in the case of the Reach toothbrush the Palm Pilot or the critical incident reporting method developed at the Philadelphia Children's hospital the technology is a success The Fender stratocaster guitar became the favourite of musicians around the globe because it was designed with the needs of guitarists in mind in everything from its overall shape to the position of its controls The Human tech Aviation Safety Reporting System a way for pilots to confidentially report near misses has made air travel dramatically safer Technology as Kim Vicente understands it isn't just the physical stuff we use In The Human Factor the word is used in a much broader sense to include the physical and non physical elements of complex systems Information teamwork organizational structures and political decisions play a crucial role in determining how well a technological system as a whole functions The Human tech ladder sets this out in more detail and also provides the structure for the rest of the book Design should begin by understanding a human or societal need and then tailoring the technology to reflect what we know about human nature at the physical psychological team organizational and political levels Kim Vicente offers a host of examples of technology relating to human needs poorly and well at each level The physical is perhaps easiest to understand a toothbrush that fits into hard to reach parts of the human mouth is better tailored to the human body than one that cannot At the psychological level technology has to take into account how people process and remember information whether in designing voicemail systems or airport baggage checks Poor Human tech can be devastating For example awkwardly placed and uninformative gauges in the design of the control room at the Three Mile Island nuclear power station left even highly trained engineers uncertain as to the status of the reactor contributing to the infamous accident there At the team level the Cockpit Resource Management system is a way of training pilots to communicate and share responsibilities effectively The way people work together is itself a form of technology that needs to run smoothly to avoid disastrous accidents such as the time an Eastern Airlines jet crashed in Florida because the entire crew was distracted by the condition of an unimportant light bulb and no one attended to flying the plane Kim Vicente discusses the human factor at the organizational level in chapter seven of The Human Factor Soft technology such as staffing

levels and corporate culture can be designed so that an organization learns from its front line staff For instance the medical community traditionally holds individual doctors and nurses responsible for mistakes When things go wrong we tend to blame people when in fact they may have made heroic efforts to use poorly designed technology Errors in hospitals are more often the result of systemic flaws none is wholly at fault but together they interact to cause accidents At the Philadelphia Children's hospital the Human tech solution is a system which encourages staff to make full reports on near misses and asks them to tell managers about potential dangers so that the hospital as a whole can institute protective measures This critical incident technique led to a 90% reduction in medical mistakes at the hospital The final level of human nature which The Human Factor addresses is the political Here a Human tech shows us that when political elements laws funding regulations ignore what we know about human nature dangers arise In the case of the E coli tragedy in Walkerton Ontario Kim Vicente uncovers a host of system design elements at the political level policy aims legal regulations budget allocations which interacted with environmental factors and staff incompetence to kill seven people and make thousands of others sick In conclusion Kim Vicente feels that our civilization is at a crossroads we have to change our relationship with technology to bring an end to technology induced death and destruction and start to improve the lives of everyone on the planet The final chapter of The Human Factor sets out the ways we can regain control of our lives As consumers we can recognize and distinguish better designed products and buy the more Human tech ones By participating actively in society we can remind people that ignoring the human factor as happened at Walkerton has terrible implications In our workplaces we can all ensure that more human friendly technologies hard and soft predominate Companies need to take a Human tech approach to the rules and practices they institute and design soft systems to guarantee that their employees have the competencies information goals and commitment to do their jobs Other bodies from the media to engineering schools can all play their part in making technology with a close affinity to human nature the norm rather than a rarity a better world will be the inevitable result
