Smart Cities Mark Deakin, 2013-08-22 Smart city development has emerged a major issue over the past 5 years Since the

launch of IBM's Smart Planet and CISCO's Smart Cities and Communities programmes their potential to deliver on global sustainable development targets have captured the public's attention. However, despite this growing interest in the development of smart cities, little has as yet been published that either sets out the state of the art or which offers a less than subjective, arm's length and dispassionate account of their potential contribution. This book brings together cutting edge research and the findings from technical development projects from leading authorities within the field to capture the transition to smart cities. It explores what is understood about smart cities, paying particular attention on the governance, modelling and analysis of the transition that smart cities seek to represent. In paving the way for such a representation, the book begins to account for the social capital of smart communities and begins the task of modelling their embedded intelligence through an analysis of what the embedded intelligence of smart cities contributes to the sustainability of urban development. This innovative book offers an interdisciplinary perspective and shall be of interest to researchers, policy analysts and technical experts involved in and responsible for the planning, development and design of smart cities. It will also be of particular value to final year undergraduate and postgraduate students interested in Geography, Architecture and Planning.

The Smart Cyber Ecosystem for Sustainable Development Pardeep Kumar, Vishal Jain, Vasaki Ponnusamy, 2021-10-12

The Smart Cyber Ecosystem for Sustainable Development. As the entire ecosystem is moving towards a sustainable goal, technology driven smart cyber system is the enabling factor to make this a success and the current book documents how this can be attained. The cyber ecosystem consists of a huge number of different entities that work and interact with each other in a highly diversified manner. In this era when the world is surrounded by many unseen challenges and when its population is increasing and resources are decreasing, scientists, researchers, academicians, industrialists, government agencies and other stakeholders are looking toward smart and intelligent cyber systems that can guarantee sustainable development for a better and healthier ecosystem. The main actors of this cyber ecosystem include the Internet of Things, IoT, artificial intelligence, AI, and the mechanisms providing cybersecurity. This book attempts to collect and publish innovative ideas, emerging trends, implementation experiences and pertinent user cases for the purpose of serving mankind and societies with sustainable societal development. The 22 chapters of the book are divided into three sections. Section I deals with the Internet of Things. Section II focuses on artificial intelligence and especially its applications in healthcare, whereas Section III investigates the different cyber security mechanisms. Audience: This book will attract researchers and graduate students working in the areas of artificial intelligence, blockchain, Internet of Things, information technology as well as industrialists, practitioners, technology developers, entrepreneurs and professionals who are interested in exploring, designing and implementing these technologies.
