Smart Things Mike Kuniavsky, 2010-09-14 The world of smart shoes appliances and phones is already here but the practice of user experience UX design for ubiquitous computing is still relatively new Design companies like IDEO and frogdesign are regularly asked to design products that unify software interaction device design and service design which are all the key components of ubiquitous computing UX and practicing designers need a way to tackle practical challenges of design Theory is not enough for them luckily the industry is now mature enough to have tried and tested best practices and case studies from the field *Smart Things* presents a problem solving approach to addressing designers needs and concentrates on process rather than technological detail to keep from being quickly outdated It pays close attention to the capabilities and limitations of the medium in question and discusses the tradeoffs and challenges of design in a commercial environment Divided into two sections frameworks and techniques the book discusses broad design methods and case studies that reflect key aspects of these approaches The book then presents a set of techniques highly valuable to a practicing designer It is intentionally not a comprehensive tutorial of user centered design as that is covered in many other books but it is a handful of techniques useful when designing ubiquitous computing user experiences In short *Smart Things* gives its readers both the why of this kind of design and the how in well defined chunks Tackles design of products in the post Web world where computers no longer have to be monolithic expensive general purpose devices Features broad frameworks and processes practical advice to help approach specifics and techniques for the unique design challenges Presents case studies that describe in detail how others have solved problems managed trade offs and met successes [Intelligent Software Methodologies, Tools and Techniques](#) Hamido Fujita, Ali Selamat, 2015-05-06 This book constitutes the best papers selection from the proceedings of the 13th International Conference on Intelligent Software Methodologies Tools and Techniques SoMeT 2014 held in Langkawi Malaysia in September 2014 The 27 full papers presented were carefully reviewed thoroughly revised or enlarged and selected as best papers from the 79 published proceedings papers which had originally been selected from 192 submissions The papers are organized in topical sections on artificial intelligence techniques in software engineering requirement engineering high assurance system intelligent software systems design creative and arts in interactive software design software methodologies for reliable software design software quality and assessment for business enterprise software analysis and performance model software applications systems **Designing Connected Products** Claire Rowland, Elizabeth Goodman, Martin Charlier, Ann Light, Alfred Lui, 2015-05-18 Networked thermostats fitness monitors and door locks show that the Internet of Things can and will enable new ways for people to interact with the world around them But designing connected products for consumers brings new challenges beyond conventional software UI and interaction design This book provides experienced UX designers and technologists with a clear and practical roadmap for approaching consumer product strategy and design in this novel market By drawing on the best of current design practice

[Spaces of Interaction, Places for Experience](#) David Benyon, 2022-06-01 Spaces of Interaction Places for Experience is a book about Human Computer Interaction HCI interaction design ID and user experience UX in the age of ubiquitous computing The book explores interaction and experience through the different spaces that contribute to interaction until it arrives at an understanding of the rich and complex places for experience that will be the focus of the next period for interaction design The book begins by looking at the multilayered nature of interaction and UX not just with new technologies but with technologies that are embedded in the world People inhabit a medium or rather many media which allow them to extend themselves physically mentally and emotionally in many directions The medium that people inhabit includes physical and semiotic material that combine to create user experiences People feel more or less present in these media and more or less engaged with the content of the media From this understanding of people in media the book explores some philosophical and practical issues about designing interactions The book journeys through the design of physical space digital space information space conceptual space and social space It explores concepts of space and place digital ecologies information architecture conceptual blending and technology spaces at work and in the home It discusses navigation of spaces and how people explore and find their way through environments Finally the book arrives at the concept of a blended space where the physical and digital are tightly interwoven and people experience the blended space as a whole The design of blended spaces needs to be driven by an understanding of the correspondences between the physical and the digital by an understanding of

conceptual blending and by the desire to design at a human scale There is no doubt that HCI and ID are changing The design of microinteractions remains important but there is a bigger picture to consider UX is spread across devices over time and across physical spaces The commingling of the physical and the digital in blended spaces leads to new social spaces and new conceptual spaces UX concerns the navigation of these spaces as much as it concerns the design of buttons and screens for apps By taking a spatial perspective on interaction the book provides new insights into the evolving nature of interaction design
