Garrett, 2017-12-06 There is a national crisis in education, and it's not the highly debated philosophical discussions or heated political arguments we are used to hearing. Survey data establishes the fact that classrooms throughout the nation suffer from the presence of a small percentage of misbehaving students. Teachers are ill equipped to deal with these disruptive students, resulting in lost classroom time and demoralized educators who are perpetually blamed for the student's bad performance. The root cause of these misbehaving children is not a lack of intellectual ability but a lack of character and grit, the important noncognitive skills required for success in life. *The Kids are Smart Enough* is a book of hope with surprisingly practical solutions revealed by listening to teachers, learning from data, and looking for the root cause. This book will help you to discover how struggling students can be reached and teachers

encouraged Will We Be Smart Enough? Earl Hunt, 1995-07-20 The American workforce and the American workplace are rapidly changing in ways that make them increasingly incompatible Advances in automation and telecommunications have eliminated many jobs based on routine tasks and muscle power and fueled the demand for employees who can understand and apply new technologies But as Earl Hunt convincingly demonstrates in Will We Be Smart Enough such smart employees will be in dangerously short supply unless fundamental changes are made to our educational and vocational systems Will We Be Smart Enough combines cognitive theory demographic projections and psychometric research to measure the capabilities of tomorrow's workforce against the needs of tomorrow's workplace Characterized by sophisticated machinery instant global communication and continuous reorganization the workplace will call for people to fuse multiple responsibilities adapt quickly to new trends and take a creative approach to problem solving Will Americans be able to meet the difficult and unprecedented challenges brought about by these innovations Hunt examines data from demographic sources and a broad array of intelligence tests whose fairness and validity he judiciously assesses He shows that the U S labor force will be increasingly populated by older workers who frequently lack the cognitive flexibility required by rapid change and by racial and ethnic minorities who have so far not fully benefitted from the nation's schools to develop the cognitive skills necessary in a technologically advanced workplace At the heart of Will We Be Smart Enough lies the premise that this forecast can be altered and that cognitive skills can be widely and successfully taught Hunt applies psychological principles of learning and cognitive science to a variety of experimental teaching programs and shows how the information revolution which has created such rapid change in the workplace can also be used to transform the educational process and nurture the skills that the workplace of the future will require Will We Be Smart Enough answers naysayers who pronounce so many people cognitively disadvantaged by suggesting that new forms of education can provide workers with enhanced skills and productive employment in the twenty first century Hunt's book provides succinct lucid presentations of our best scientific understandings of thinking intelligence job performance and how to measure them Only by comprehending and applying these understandings to develop sound educational and instructional strategies can we create a capable workforce for the digital age John T Bruer President James S McDonnell Foundation

Policing Problem Places Anthony Allan Braga,David Weisburd,2010
Both those who study crime and those who fight it agree that crime is not spread evenly across city landscapes Rather clusters of crime a few hot spots host a vastly disproportionate amount of criminal activity Even within the most crime ridden neighborhoods crime concentrates at a few locations while other areas remain relatively crime free So if police focus their limited resources at these problem places a practice known as hot spots policing they will be better positioned to lower citywide crime rates and do it more efficiently In Policing Problem Places Anthony A Braga and David L Weisburd demonstrate that hot spots policing is a powerful and cost effective approach to crime prevention While putting police officers where crime happens most is an old and well established idea in practice it is often avoided or not properly implemented Braga and Weisburd draw on rigorous scientific evidence to show how police officers should use problem oriented policing and situational crime prevention techniques to address the place dynamics situations and characteristics that cause a spot to be hot But the benefits of hot spots policing do not end with conserving public dollars and police resources Illustrating how policing problem places can benefit police community relations especially in minority neighborhoods where residents have long suffered from high crime and poor police service Braga and Weisburd show how police can make efforts to develop positive and collaborative relationships with residents and avoid the indiscriminant enforcement tactics that undermine the legitimacy of the police A vital resource for police departments everywhere Policing Problem Places offers a blueprint for rethinking what police should do and how they should do it
