Cloud Connectivity and Embedded Sensory Systems Lambert Spaanenburg, Hendrik Spaanenburg, 2010-11-10

Sensor networks are meant to create awareness in space and time. They may be measuring the presence of an object or a condition characterizing an object stream or a situational pattern or even detect abnormalities that are to occur. This book provides new theory on the design of wireless sensor networks based on concepts developed for large scale distributed computing environments known as cloud computing. It provides a single source entry into the world of intelligent sensory networks with a step by step discussion of building case studies that capture the requirements taking into account practical limitations of creating ambient intelligence. The reader will not only achieve a better understanding of sensory clouds swarms and flocks but is also guided by examples of how to design such networks taking the typical characteristics of diverse application areas into account. Computational Methods and Experimental Measurements XIV C. A. Brebbia, G. M.

This volume presents the set of final accepted papers for the tenth edition of the IWANN conference International Work Conference on Artificial neural Networks held in Salamanca Spain during June 10-12 2009. IWANN is a biennial conference focusing on the foundations theory models and applications of systems inspired by nature mainly neural networks evolutionary and soft computing systems. Since the first edition in Granada LNCS 540 1991 the conference has evolved and matured. The list of topics in the successive Call for papers has also evolved resulting in the following list for the present edition: 1 Mathematical and theoretical methods in computational intelligence Complex and social systems Evolutionary and genetic algorithms Fuzzy logic Mathematics for neural networks RBF structures Self organizing networks and methods Support vector machines 2 Neurocomputational formulations Single neuron modelling Perceptual modelling System level neural modelling Spiking neurons Models of biological learning 3 Learning and adaptation Adaptive systems Imitation learning Reconfigurable systems Supervised non supervised reinforcement and statistical algorithms 4 Emulation of cognitive functions Decision making Multi agent systems Sensor mesh Natural language Pattern recognition Perceptual and motor functions visual auditory tactile virtual reality etc Robotics Planning motor control 5 Bio inspired systems and neuro engineering Embedded intelligent systems Evolvable computing Evolving hardware Microelectronics for neural fuzzy and bio inspired systems Neural prostheses Retinomorphic systems Brain computer interfaces BCI Nanosystems Nanocognitive systems **Natural Computing for**

Simulation and Knowledge Discovery Nunes de Castro, Leandro, 2013-07-31. Nature has long provided the inspiration for a variety of scientific discoveries in engineering biomedicine and computing though only recently have these elements of

nature been used directly in computational systems Natural Computing for Simulation and Knowledge Discovery investigates the latest developments in nature influenced technologies Within its pages readers will find an in depth analysis of such advances as cryptographic solutions based on cell division the creation and manipulation of biological computers and particle swarm optimization techniques Scientists practitioners and students in fields such as computing mathematics and molecular science will make use of this essential reference to explore current trends in natural computation and advance nature inspired technologies to the next generation Advanced Concepts for Intelligent Vision Systems Wilfried Philips,Dan Popescu,Paul Scheunders,2007-08-18 This book constitutes the refereed proceedings of the 9th International Conference on Advanced Concepts for Intelligent Vision Systems ACIVS 2007 held in Delft The Netherlands August 2007 Coverage includes noise reduction and restoration segmentation motion estimation and tracking video processing and coding camera calibration image registration and stereo matching biometrics and security medical imaging image retrieval as well as classification and recognition *High-performance Computing in Engineering* H. manufacturing and process engineering As the scale of the problems to be addressed increases there is a need for numerically robust and efficient computational procedures linked to powerful interactive graphical interfaces which maximise the user of limited human resources and of course standardised data bases which can be used with wide range of analysis and design procedures Topics covered included the now traditional domains of algorithm architectures and tools and there was a very welcome emphasis on applications where no less than four sessions were devoted to this important aspect
