Visualizing Technology Chapter 2:

Museums and the Construction of Disciplines Christopher Whitehead, 2013-11-20 Museums and museum politics were important elements in the development of the disciplines of Archaeology and Art History in nineteenth century Britain Here Christopher Whitehead explores some of the key debates and events which led to the conceptual differentiation and physical separation of archaeological and artistic material culture looking especially at the ways in which objects and histories were contested within museum politics For example in the 1850s the status of Egyptian antiquities as art or archaeology was keenly debated and this related closely to questions about which kinds of museum should house them and the possible histories and epistemologies in which they might figure This concise study serves as a basis for a discussion of the continued intellectual legacy of this for our understanding management and presentation of the past in the museum and in curricula It is argued that by understanding the politics and circumstances through which the two disciplines were delimited and distinguished from one another we may be able to glimpse retrospectively the possibility of alternative art histories and alternative archaeologies

The Engine of Visualization Patrick Maynard, 2018-08-06 In the first philosophical book wholly about photography Patrick Maynard dispels some basic persistent confusions by treating photography as a technology a way to enhance and filter human power Once photography is understood as a kind of technology Maynard argues insights about technology may be applied to provide the general perspective on photography that has been missing

Reconstruction, Replication and Re-enactment in the Humanities and Social Sciences Sven Dupré, Anna Harris, Julia Kursell, Patricia Lulof, Maartje Stols-Witlox, 2025-10-01 Performative methods are playing an increasingly prominent role in research into historical production processes materials bodily knowledge and sensory skills and in forms of education and public engagement in classrooms and museums This book offers for the first time sustained interdisciplinary reflections on performative methods variously known as Reconstruction Replication and Re enactment RRR practices across the fields of history of science archaeology art history conservation musicology and anthropology Each of these fields has distinct histories approaches tools and research questions Researchers in the historical disciplines have used reconstructions to learn about the materials and practices of the past while anthropologists and ethnographers have more often studied the re enactments themselves participating in these performances as engaged observers In this book authors bring their experiences of RRR practices within their discipline into conversation with RRR practices in other disciplines providing a basis for interdisciplinary cross fertilization

Storytellers John M. Staudenmaier,1989-09-06 Technology's Storytellers documents the emergence of the history of

technology as a coherent intellectual discipline Based on an analysis of nearly 300 articles published in Technology and Culture it proposes a mode of historical research as a communal rather than an individualistic endeavor looking for patterns of consensus in the authors choice of time periods geographical locations and types of technology to study It discusses the recurrent themes of the relationship between science and technology and the cultural ambience of technology and examines the extent to which historians are moving away from a once pervasive ideology of autonomous technological progress Co published with the Society for the History of Technology *Embodying Data* Qi Li,2020-06-19 This book investigates a new interactive data visualisation concept that employs traditional Chinese aesthetics as a basis for exploring contemporary digital technological contexts It outlines the aesthetic approach which draws on non Western aesthetic concepts specifically the Yijing and Taoist cosmological principles and discusses the development of data based digital practices within a theoretical framework that combines traditional Taoist ideas with the digital humanities The book also offers a critique of the Western aesthetics underpinning data visualisation in particular the Kantian sublime which prioritises the experience of power over the natural world viewed at a distance Taoist philosophy in contrast highlights the integration of the surface of the body and the surface of nature as a Taoist body rather than promoting an opposition of mind and body The book then explores the transformational potential between the human body and technology particularly in creating an aesthetic approach spanning traditional Chinese aesthetics and gesture based technology Representing a valuable contribution to the digital humanities the book helps readers understand data based artistic practices while also bringing the ideas of traditional Chinese aesthetics to Western audiences In addition it will be of interest to practitioners in the fields of digital art and data visualisation seeking new models **Mixed Analog-digital Vlsi Devices And Technology** Yannis Tsividis,2002-08-19 Improve your circuit design potential with this expert guide to the devices and technology used in mixed analog digital VLSI chips for such high volume applications as hard disk drives wireless telephones and consumer electronics The book provides you with a critical understanding of device models fabrication technology and layout as they apply to mixed analog digital circuits You will learn about the many device modeling requirements for analog work as well as the pitfalls in models used today for computer simulators such as Spice Also included is information on fabrication technologies developed specifically for mixed signal VLSI chips plus guidance on the layout of mixed analog digital chips for a high degree of analog device matching and minimum digital to analog interference This reference book features an intuitive introduction to MOSFET operation that will enable you to view with insight any MOSFET model besides thorough discussions on valuable large signal and small signal models Filled with practical information this first of its kind book will help you grasp the nuances of mixed signal VLSI device models and layout that are crucial to the design of high performance chips **Applying Language Technology in Humanities Research** Barbara McGillivray,Gábor Mihály Tóth,2020-07-13 This book presents established and state of the art methods in Language Technology including text mining corpus linguistics computational linguistics and

natural language processing and demonstrates how they can be applied by humanities scholars working with textual data. The landscape of humanities research has recently changed thanks to the proliferation of big data and large textual collections such as Google Books, Early English Books Online, and Project Gutenberg. These resources have yet to be fully explored by new generations of scholars, and the authors argue that Language Technology has a key role to play in the exploration of large scale textual data. The authors use a series of illustrative examples from various humanistic disciplines, mainly but not exclusively from History, Classics, and Literary Studies, to demonstrate basic and more complex use case scenarios. This book will be useful to graduate students and researchers in humanistic disciplines working with textual data, including History, Modern Languages, Literary studies, Classics, and Linguistics. This is also a very useful book for anyone teaching or learning Digital Humanities and interested in the basic concepts from computational linguistics, corpus linguistics, and natural language processing.
