Differential Equations with Boundary Value Problems James R. Brannan, 2010-11-08 Unlike other books in the market this second edition presents differential equations consistent with the way scientists and engineers use modern methods in their work Technology is used freely with more emphasis on modeling graphical representation qualitative concepts and geometric intuition than on theoretical issues It also refers to larger scale computations that computer algebra systems and DE solvers make possible And more exercises and examples involving working with data and devising the model provide scientists and engineers with the tools needed to model complex real world situations      Introduction to Geophysical Fluid Dynamics
