Y. Narasimhan,Stanford University. Department of Aeronautics and Astronautics,Nicholas J. Hoff,1967 The nonlinear partial differential equations of von Karman and Donnell governing the deformations of initially imperfect cylindrical shells are reduced to a consistent set of ordinary differential equations A numerical procedure is then developed for the solution of these equations together with the associated boundary conditions This method is used to determine the number of waves at buckling as well as the load carrying capacity of imperfect cylindrical shells of finite length subjected to uniform axial compression in the presence of the least amount of restraint along the simply supported boundaries It is found that details of the boundary conditions have little effect on the number of waves into which the shell buckles around the circumference This number is determined essentially by the length to radius and radius to thickness ratios The absence of an edge restraint to circumferential displacements reduces the classical value of the buckling load by a factor of about two as compared to the classical value On the other hand shells with these boundary conditions are less sensitive to initial imperfections in the shape and thus the maximal load supported in the presence of unavoidable initial deviations can be the same for shells with and without a restraint to circumferential displacements along the edges Author *Dictionary of Chemicals and Raw Products Used in the Manufacture of Paints, Colours, Varnishes and Allied Preparations* George Henry Hurst,1901 **Fuzzy Logic in Financial Analysis** Anna Maria Gil-Lafuente,2006-06-10 In today s increasingly complex and uncertain business environment financial analysis is yet more critical to business managers who tackle problems of an economic or business nature Knowledge based on formal logic and even experience becomes less sufficient This volume systematically sets out the basic elements on which to base financial analysis for business in the new century It incorporates a previous work that can serve as the basis and foundation for the new contributions that are now being made in the field of financial economy and intend to provide business with instruments and models suitable for dealing with the new economic context In dealing with rapid and unpredictable changes in technological and business conditions it postulates a growing reliance on the opinions of experts instead of past data or probabilistic forecasts which is a radical change but may yield fruitful results For this reason much emphasis is devoted to the problem of aggregation of the opinion of experts in the financial field with the object of limiting
