Clemetson, 2018-01-10 The factors affecting blood vitamin C levels are described in detail in this series Many factors such as aging smoking infection trauma surgery hemolysis hormone administration heavy metals pregnancy alcohol ionizing radiation and several medicines have been found to cause a disturbance of ascorbic acid metabolism and to reduce blood vitamin C levels Indeed abnormalities of ascorbic acid metabolism due to factors such as smoking occur much more frequently than does dietary vitamin C deficiency today It is now known that low blood vitamin C levels are associated with histaminemia high blood histamine levels and also that ascorbate responsive histaminemia is common in apparently healthy people High blood histamine levels are believed to cause small hemorrhages within the inner walls of the blood vessels and these may lead to the deposition of cholesterol as an aberrant form of wound healing Ascorbic acid not only reduces blood histamine levels but also aids the conversion of cholesterol to bile acids in the liver The clinical pathological and chemical changes observed in ascorbic acid deficiency are discussed in detail Several diseases and disorders associated with low blood vitamin C levels are also described Possible toxic effects resulting from the oxidation of ascorbic acid are noted and reasons for the use of D catechin or other chelating fiber to prevent or minimize the release of ascorbate free radical are detailed An excellent reference for physicians nutritionists and other scientists **Vitamin C** Han Asard, James May, Nicholas Smirnoff, 2004-08-02 Vitamin C ascorbic acid is a key vitamin to animals and plants This book looks at all aspects of vitamin C its chemical and biochemical properties its role in various plants and animals and its effect on our health Written by an international team of experts together they represent much of the expertise on vitamin C throughout the world *Vitamin C in Health and Disease* Anita C. J. D, 2002-09-30 Review for yourself the incredible evidence over 1 200 literature references that clearly reveals How vitamin C has been able to cure or contribute to the cure of many common infectious diseases including some deemed incurable such as hepatitis and polio Because of these documented effects the use of properly dosed vitamin C within a comprehensive treatment protocol can also eliminate the need for many vaccinations and toxic prescription medicines That vitamin C is the treatment of choice for many potentially fatal toxins and other toxic medical conditions that poison the body for which no effective treatments presently exist This makes vitamin C the ideal treatment for many infectious diseases that also produce

highly toxic poisons and the associated toxic by products of some microbial metabolism That vitamin C is remarkably free of any side effects Vitamin C is unquestionably the most non toxic nutrient and supplement that is available today An enormous amount of scientific literature on vitamin C has been written over the last century A great deal of this literature much from our most esteemed research centers in the United States has been cited in this book Don't just accept a casual unenlightened assessment of what vitamin C can and cannot do Read the truth for yourself *Vitamin C* Jean Guy LeBlanc, 2019-05-10

Vitamin C or ascorbic acid is mainly present in fruits and vegetables The consumption of such foods is important since the human body does not have the ability to produce this essential micronutrient Because it is water soluble it can also easily be lost in cooking and long term storage Even though the role of vitamin C has been known since the early 1930s only recently have researchers been actively studying and demonstrating its role and function in the treatment and prevention of many diseases These studies will be the key to providing the scientific basis that explains why this simple but important vitamin possesses such a wide range of positive biological activities *Degradation of Ascorbic Acid in Different Temperatures. The Influence of Temperature on Vitamin C* Maciej Nodzyński, 2021-08-27 Scientific Essay from the year 2021 in the subject Chemistry Food Chemistry grade 7 IB language English abstract This paper aims to investigate how different temperatures influence the degradation of vitamin C as well as to clarify the preconception about this vitamin More specifically the relationship between the temperature and the concentration of vitamin C will be researched The research suggests that vitamin C degrades in elevated temperatures so it is highly probable that it also degrades in hot tea and other hot beverages Consequently vitamin C is rather not the component of hot tea with lemon juice that provides curative properties opposite to what many people believe The subject is important because it extends the knowledge about how vitamin C degrades in different temperatures and how to handle this vitamin properly The research shows at which temperature vitamin C is most effective and this information could be useful for pharmaceutical companies when improving the effectiveness and medicinal properties of drugs where vitamin C is the main constituent The investigation uses the method of redox titration of vitamin C with iodine solution and the detailed information about this process is presented **VITAMIN C: the Real Story**

C and its many functions in the earth's natural environment Vitamin C and Human Health ,2014 Ascorbic acid is a small simple water soluble molecule synthesised by most plants and animals with the exception of humans and some animal species due to mutations in the gene encoding the terminal enzyme in the biosynthetic pathway For humans it is thus a vitamin vitamin C that must be obtained from the diet with complete deficiency resulting in the fatal disease scurvy Many functions have been attributed to this fascinating molecule and despite nearly 90 years of research since its discovery new roles are still being uncovered including recent discoveries that it acts as a regulator of epigenetic marks and transcription factors 1 In this volume we begin with a review by Michels and Frei on specific factors that need to be taken into consideration when carrying out vitamin C research Translational research normally comprises a progression from in vitro cell culture studies to animal models and finally to clinical trials At each of these stages there are requirements specific to vitamin C research that need to be integrated into study designs and this review describes these in detail
