Vehicle Occupant Safety Survey, 2009 The 2007 Motor Vehicle Occupant Safety Survey was the sixth in a series of periodic national telephone surveys on occupant protection issues conducted for the National Highway Traffic Safety Administration NHTSA Data collection was conducted by Schulman Ronca Bucualas Inc a national survey research organization The survey used two questionnaires each administered to a randomly selected national sample of about 6 000 persons age 16 or older Interviewing began January 9 2007 and ended April 30 2007 This report presents the survey findings pertaining to child restraint use Detailed information on the survey methodology as well as copies of the questionnaires are contained in a separate NHTSA report 2007 Motor Vehicle Occupant Safety Survey Volume 1 Methodology Report Among drivers who lived with children age 12 or younger most indicated that the youngest child typically rode in the back seat Parents caregivers of children under the age of 9 usually said the referent child either used a child car seat all the time 77% or never 18% If the child never used a car seat it usually was because the child had graduated to seat belt use However 23% of the children who never used a car seat but wore seat belts said the shoulder belt cut across their face or neck on most trips 23% usually put the shoulder belt behind their back and 12% put the shoulder belt under their arm Many children ages 6 through 8 discontinued using child car seats including booster seats Although booster seats are recommended for most children ages 4 through 8 the survey found only 40% of children in that age range using them and another 24% using front facing child safety seats While most parents caregivers 92% had heard of booster seats 17% of these had concerns about their safety Prevention Report, 1996 *World Report on Child Injury Prevention* M. M. Peden, 2008 Child injuries are largely absent from child survival initiatives presently on the global agenda Through this report the World Health Organization the United Nations Children s Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities It should be seen as a complement to the UN Secretary General s study on violence against children released in late 2006 that report addressed violence related or intentional injuries Both reports suggest that child injury and violence prevention programs need to be integrated into child survival and other broad strategies focused on improving the lives of children Evidence demonstrates the dramatic successes in child injury prevention in countries which have made a concerted effort These results make a case for increasing investments in human resources and institutional capacities Implementing proven interventions could save more than a thousand children s lives a
