

INTRODUCTION

The speed with which telematics has evolved since its beginnings in the 1980s is nothing short of astonishing. Today we perhaps take for granted that we can send each other our locations with a simple cell phone message or that an electronic device guides us from door to door if we require the road. In the modern age where you can check online prices of the nearest gas stations using your car's very own built-in browser, can you imagine that even as recently as fifteen years ago it was commonplace to use paper maps?

What began with the development of a basic global positioning system has evolved into a broad, sophisticated spectrum covering numerous interconnected fields, from road safety and transportation to telecommunications and more.

Telematics has without doubt become an indispensable element in our everyday lives. In this brief guide to the history of telematics, you will learn about how it came into existence, its evolution since the 1980s to the present day, and what we might expect in coming years.

The chapters that follow discuss the types of inventions that can be patented, recently a subject of much dispute; the process of applying for a patent; the requirements of a valid patent; and the procedures for determining if a patent has been infringed upon.
